GENERAL INDEX to REPORT, TABLES, and ABSTRACTS 295–308

REPORT

TO

THE RIGHT HONOURABLE WALTER H. LONG, M.P.

President of the Local Government Board, &c., &c.

(1899.)

SIR,

I HAVE the honour to submit to you the following Report on the estimated population, and on the marriages, births, and deaths registered in England and Wales during the year 1899.

POPULATION.

The population of England and Wales, as enumerated on 6th April, 1891, consisted of 29,002,525 persons. The natural increase by excess of births over deaths from the beginning of April 1891 to the middle of 1899 amounted to 3,014,014; and, if there had been neither emigration nor immigration, this would have raised the population to 32,016,539 at the latter date. In the absence of precise information regarding these disturbing causes, the populations in the annual Reports are provisionally estimated on the assumption that the rate of increase which had prevailed in the last completed intercensal period has since been maintained.

The census of London which was taken in March 1896, furnished the means of revising the estimates of the population of the metropolis for the years 1891–96. Accordingly the populations which are shown in Table 1, and are used in the calculation of the rates of marriage, birth, and death for this Report, are estimated on the assumption that the rates of increase which had occurred (1) in London between 1891 and 1896, and (2) in

the remainder of the country between 1881 and 1891, were maintained until the end of 1899. The population of England and Wales calculated in this way amounted, in the middle of the year 1899, to 31,742,588 persons, of whom 15,380,573 were males, and 16,362,015 were females.

Marriages.

The number of marriages registered during the year 1899 was 262,334, corresponding to a rate of 16·5 persons married per 1000 of the estimated population. This is the highest marriage rate which has been recorded since 1876, when the rate was also 16·5; and it is 1·1 above the mean rate in the ten years 1889–98. It is possible that, when the figures shall have been revised on the basis of the results of the coming Census, the recent increase in the marriage-rate may be found to have been only apparent; but this can only happen if the population has increased more rapidly since 1891 than in the intercensal period 1881–91. One of two things is certain—either there has been an increase in the rate of growth of the population, or there has been an increase in the marriage-rate. This increase of the marriage-rate (as calculated on the provisional estimates of population) has been general throughout the country. In five counties only, viz., Bedfordshire, Dorsetshire, Rutlandshire, Monmouthshire, and South Wales, the rate in 1899 was within 0·2 per 1000 more or less than the mean rate in the preceding ten years. All other counties showed an increase of at least 0·5 per 1000 in 1899, the increase exceeding 2·0 per 1000 in Kent, Hertfordshire, Worcestershire, Lincolnshire, and the North Riding of Yorkshire. Comparing one county with another in 1899, the lowest rates were 12·3 per 1000 in Rutlandshire, 13·2 in Middlesex, 13·6 in Oxfordshire, 13·7 in Westmorland, 13·8 in Bedfordshire and in Dorsetshire, and 13·9 in Sussex; while the highest were 17·5 in the West Riding of Yorkshire, 17·6 in Staffordshire and in Nottinghamshire, 17·9 in Northumberland, 18·4 in London, and 18·6 in Warwickshire.

The accompanying Table (Table A) shows the changes in the marriage-rate, and also the changes in the value of exports and imports, in the price of wheat, and in the amount cleared at the London Bankers' Clearing House, during a series of years.

Certified Places of Worship.—The number of buildings certified for religious worship in the course of 1899, and recorded in the official register under the provisions of the Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81, was 560; while 239 buildings were removed from the register on proof of disuse: the total number on the register at the end of the year 1899 was 23,936.

Buildings registered for the Solemnization of Marriages.—At the end of the year 1899 there were 15,309 churches or chapels of the Established Church in which marriages may legally be solemnized, showing an increase of 8 upon the number at the end of 1898. There were also 12,578 buildings registered for the solemnization

1899	16·5	6 10 5	11 19 2	20 1 8	25 8	288

* The figures in the marriage-rate column are not strictly comparable with those in columns 2, 3, and 4, inasmuch as the former relate only to England and Wales, whilst the latter relate to the whole of the United Kingdom. The figures relating to exports and imports and to the price of wheat, as well as those showing the amount cleared at the London Bankers' Clearing House, are derived from the Board of Trade Statistical Abstracts.

of marriages by rites other than those of the Established Church, showing an increase of 293 upon the number on the register at the end of the previous year. (Table 6.)

Special interest attaches at the present time to the operation of the Marriage Act of 1898, which came into force on 1st April, 1899.* This Act provides that, under specified conditions, marriages may be solemnized in registered buildings without the attendance of a Registrar of Marriages. In order that a marriage may be so solemnized it is necessary (1) that marriage register books shall have been supplied from this Office for the building in which the ceremony is to take place; and (2) that a person who has been duly authorized for the purpose by the trustees or other governing body of the building, or of some other registered building in the same registration district, shall be present and shall record the marriage.

At the end of the year 1899 the governing bodies of 1,262 out of the 12,578 registered buildings had availed themselves of the new Act. The denominations to which these buildings belong are as follows :—

Wesleyan Methodists	611
Congregationalists	248
Baptists	132
United Methodist Free Churches	91
Primitive Methodists	62
Calvinistic Methodists	29
Methodist New Connexion	24
Other Denominations, and Unsectarian ...	65
	1,262

It may here be noted that, up to the end of the year 1899, the provisions of the Act had not been adopted in any registered building of the Roman Catholic Church. The 1,262 registered buildings which had been supplied with marriage register books before the end of 1899 were distributed among 377 registration districts. There remained 258 registration districts within which no registered building had been brought under the operation of the new Act.

Forms of Marriage.—Of the 262,334 marriages in England and Wales during 1899, 177,896, or 678 per 1000, were solemnized according to the rites of the Established Church, and 84,438, or 322 per 1000, were contracted otherwise. During the five years 1894–98 the corresponding proportions had been nearly constant, and had averaged 686 and 314 respectively. Compared with these averages the figures for 1899 show a transference of 8 per 1000 marriages from those which were solemnized according to the rights of the Established Church to those which were not so solemnized. The decrease

* *See* pp. xlvi–xlix.

on the one side affects marriages by licence, by banns, and by Superintendent Registrar's certificate; and the increase on the other side is divided among marriages in registered buildings, marriages of Jews, and civil marriages. In the five years 1894–98, the marriages solemnized in registered buildings belonging to Roman Catholics averaged 41 per 1000, and the marriages in registered buildings belonging to other Christian denominations averaged 120 per 1000 of the total marriages. In 1899 the proportion of Roman Catholic marriages was equal to the average, whilst the marriages in registered buildings belonging to other Christian denominations rose to 124 per 1000. Of these 124 marriages in every 1000, 113 were solemnized in the presence of district registrars, and 11 in the presence of "authorized persons" under the provisions of the Marriage Act of 1898, to which reference has already been made. The actual number of such marriages was 2,912, giving an average of 2·3 to every registered building for which an authorized person had been appointed, and to which register books had been supplied. Civil marriages in Superintendent Registrars' Offices increased from an average of 147 per 1000 in the years 1894–98 to a proportion of 150 per 1000 in 1899.

First Marriages; Re-marriages.—Of the 262,334 men who married during the year under notice, 238,088, or 908 per 1000, were bachelors, and 24,246, or 92 per 1000, were widowers. Of the 262,334 women who married, 244,639, or 933 per 1000, were spinsters, and 17,695, or 67 per 1000, were widows. (Table 9.) The proportions of re-marriages show a still further decline from the figures in earlier years, as is shown by the following table :—

	In 1000 Marriages.	
	Widowers.	Widows.
1871–75	138·2	100·2
1876–80	136·2	98·0
1881–85	126·0	89·2
1886–90	119·0	83·0
1891–95	112·8	79·2
1896	103	73
1897	98	69
1898	95	68
1899	92	67

The change is shown in a still more striking form if the number of re-marriages be compared with the number of first marriages.

Thus, in 1871–75, the bachelors who married were six times as many as the widowers who re-married; in 1899, they were ten times as many. In 1871–75, the spinsters who married were nine times as many as the widows who re-married; in 1899, they were fourteen times as many.

Of the persons who married in the course of the year 1899, 353 are described in the marriage register as having been previously divorced.* The corresponding numbers in the three years 1896–98 had been 296, 311, and 376. Of the 353 divorced persons who re-married in 1899, 179 were men, of whom 141 married spinsters and 26 married widows; and 174 were women, of whom 127 married bachelors and 35 married widowers; in 12 cases divorced men married divorced women.

Ages at Marriage.—Among the persons who married in 1899, 50 per 1000 of the husbands and 165 per 1000 of the wives were minors. In the ten years 1841–50, which is the earliest period for which the statistics are available, the proportions of minors averaged 44 per 1000 bridegrooms and 138 per 1000 brides. After 1850 the proportions increased year by year, with very few exceptions, until 1874 when they reached 84 per 1000 bridegrooms and 227 per 1000 brides. Since then the figures have steadily declined, as is shown by the following table :—

	Minors in 1000 Marriages.	
	Husbands.	Wives.
1871–75	81·6	223·2
1876–80	77·8	217·0
1881–85	73·0	215·0
1886–90	63·2	200·2
1891–95	56·2	182·6
1896	53	174
1897	51	170
1898	51	168
1899	50	165

In the registration counties of Berks, Hereford, Salop, Rutland, and North Wales, the proportions of husbands under age at marriage in 1899 were less than 30 per 1000; and in the counties of Oxford,

* In Table 9, and in the Abstracts on pp. 64–74, divorced persons are included among bachelors and spinsters.

Hereford, Rutland, Westmorland, and North Wales the proportions of wives under age at marriage were less than 100 per 1000 marriages. In all these counties the corresponding proportions had also been low in recent previous years.

The highest proportions of husbands under age at marriage in 1899, were 70 per 1000 in Staffordshire, 72 in Bedfordshire, 73 in Leicestershire, and 75 in Nottinghamshire; and the highest proportions of wives under age were 205 per 1000 in Monmouthshire, 206 in Derbyshire, 215 in the East Riding of Yorkshire, 217 in Nottinghamshire, and 226 in Durham. In these counties the corresponding proportions had also been high in recent previous years.

Among the 524,668 persons who married in 1899, all but 3,529, or 1·35 per cent. of the husbands, and all but 3,795, or 1·45 per cent. of the wives, made definite statements of age in the marriage register. These proportions show a further step in the reduction of unstated ages which has been noted in recent reports. Of the 56,398 minors who married, all but 17, or 1 in 3,318, stated their ages. Among the adults, 98·58 per cent. of the husbands, and 98·27 per cent. of the wives made definite statements of age: the remaining 1·42 per cent. and 1·73 per cent. respectively being indefinitely described as "of full age."

As in previous years, unstated ages were much more frequent in re-marriages than in first marriages, and were most frequent in re-marriages of widowers. This is shown by the following figures:—

	Percentage of Ages not stated.	
	Adult Husbands.	Adult Wives.
In Marriages of—		
Bachelors with Spinsters	1·08	1·35
Bachelors with Widows	2·48	2·89
Widowers with Spinsters	3·85	4·14
Widowers with Widows	4·36	4·54
In all Marriages of—		
Bachelors	1·13	1·41
Widowers	4·04	4·30
Spinsters	1·26	1·55
Widows	3·46	3·75

If the bachelors who married in 1899 be divided into two groups, those who married spinsters and those who married widows, the mean of the recorded ages of each group shows an increase on the corresponding mean in the previous year. If the widowers who re-married be similarly divided into two groups, the means of the recorded ages show similar increase. The mean of all the recorded ages of bachelors was 26·65 years, and the mean of all the recorded ages of widowers was 44·90 years, against 26·62 and 44·70 years respectively in the previous year. In consequence, however, of the smaller proportion of re-marriages in 1899 than in 1898 the mean of the recorded ages of all the men who married or re-married showed no increase, being 28·34 years both in 1898 and 1899.

The mean ages of the several groups of spinsters who married and of widows who re-married were also greater in 1899 than in the previous year. The means of all the recorded ages were for spinsters 25·16 years, and for widows 40·83 years, against 25·14 years and 40·59 years respectively in 1898. The mean for all the women who married or re-married was 26·21 years in 1899, against 26·18 in 1898. The following Table shows the mean recorded ages of husbands and wives, arranged in several groups, in 1898 and in 1899. As in recent reports, figures are added which give some indication of the relation between the means of all the ages and the means of the recorded ages only.

TABLE B.—MEAN AGES at MARRIAGE in 1898 and 1899.

In continuation of Tables in the last three Reports, the age-constitution of the persons who married in 1898 and in 1899 is shown on the following page (Table C.)

TABLE C.—AGE-CONSTITUTION of PERSONS who MARRIED in 1898 and 1899, reduced to 1000 at ALL AGES.

	Bachelors.		Widowers.		Spinsters.		Widows.

Signature in Marriage Register.—The decrease in the proportions of persons of both sexes who sign the marriage register with marks, which has been noted in previous reports, was continued in 1899. The proportion of illiterate men fell to 29, and the proportion of illiterate women fell to 34, in 1000 marriages. In 9 per 1000 of the marriages both bride and bridegroom signed with marks; in 20 the bridegroom signed by mark and the bride wrote her name; and in 25 the bride signed by mark and the bridegroom wrote his name. The following figures show the progressive decline in the proportion of illiterates since 1871 :—

Years.	Signed by Mark in 1000 Marriages.		
	Husbands.	Wives.	Both.
1871–75...	185·4	251·8	104·2
1876–80...	148·0	199·8	74·6
1881–85...	123·4	154·8	54·4
1886–90...	84·0	98·2	30·2
1891–95...	51·2	59·6	16·6
1896	37	43	11
1897	33	40	10
1898	31	36	10
1899	29	34	9

The registration counties which in 1899 showed the highest proportions of illiteracy were: among men, Suffolk, Cornwall, Somersetshire, Shropshire, Monmouthshire, South Wales, and North Wales; and among women, Cornwall, Staffordshire, the West Riding of Yorkshire, Durham, Monmouthshire, South Wales, and North Wales. Speaking generally, the geographical distribution of illiteracy followed the same lines in 1899 as in recent previous years. Illiterates of both sexes were most common in the northern parts of the country and in Wales; in nearly all of the southern counties there were more male than female illiterates; but in London, in a few other southern counties, in most of the northern counties, and in Wales, illiterate females outnumbered illiterate males. The Metropolitan districts in which the greatest proportions of signatures by mark occurred were, as in the previous year, London City, Whitechapel, Mile End Old Town, Bethnal Green, and St. George-in-the-East. In the first three of these districts the persons who signed by mark were mainly foreign Jews; the proportions of signatures by mark in Mile End Old Town were 202 per 1000 husbands and 290 per 1000 wives. Among districts in other parts of the country which showed large proportions of illiterate brides and bridegrooms were Dudley, Birmingham, Liverpool, Wigan, Warrington, Manchester, Leeds, Dewsbury, Sheffield, Middlesbrough, Auckland, South Shields, Pontypridd, and Merthyr Tydfil. In all these and in many smaller districts the proportion of signatures by mark was equal to at least 100 per 1000 marriages; in Dudley and in Sheffield it was 160 per 1000, and in Liverpool 174 per 1000. Among smaller districts the proportions rose to 187 per 1000 in Bedwellty and 195 in Redruth.

Births.

The births registered during the year 1899 numbered 928,646, and were equal to a rate of 29·3 per 1000 persons living. This is 0·1 per 1000 below the rate in the previous year, which had been the lowest hitherto on record; and it is 1·0 below the mean rate in the ten years 1889–98. It must, however, be borne in mind that the rates for recent years are based on purely provisional estimates of population, and that inferences drawn from them are subject to modification after revision of the estimates on the basis of the approaching Census. Among registration counties the lowest birth-rates during 1899 were 22·7 in Westmorland, 22·8 in Sussex, 22·9 in Rutlandshire, 23·6 in Oxfordshire, and 24·2 in Berkshire; the highest were 32·2 in Nottinghamshire, 33·2 in Warwickshire, 33·4 in Northumberland, 35·1 in Staffordshire, and 35·3 in Durham. (Table 11.)

Sex.—The births of males numbered 473,172, and the births of females 455,474. The births of males were therefore to those of females as 1039 is to 1000, the average proportion in the preceding ten years having been 1036 to 1000. In registration counties the

lowest proportions of male to female births during 1899 were 929 to 1000 in Huntingdonshire, 933 in Rutlandshire, 991 in Monmouthshire, 1005 in Northamptonshire, and 1009 in Shropshire. The highest proportions were 1064 to 1000 in Buckinghamshire, in Oxfordshire, and in Herefordshire, 1065 in Essex, and 1094 in Dorsetshire.

Illegitimate Births.—The infants registered in 1899 as born out of wedlock numbered 37,124; they were in the proportion of 40 per 1000 births, against 42 per 1000 in each of the four years immediately preceding. In proportion to population, the illegitimate birth-rate was rather less than 1·2 per 1000, the rate in the preceding year having been slightly above this figure. Among registration counties the lowest proportions of illegitimate to total births were 28 per 1000 in Essex, 29 in Monmouthshire, 30 in Warwickshire, and 31 in Middlesex and in South Wales. The highest proportions were 60 per 1000 in North Wales, 61 in Huntingdonshire and in Norfolk, 62 in Westmorland, 64 in Cumberland, 65 in Shropshire, and 66 in Herefordshire. With the exception of Huntingdonshire, these had also been the counties with the highest average proportions of illegitimate to total births in the ten years 1889–98. (Table 11.)

Deaths.

The deaths registered in England and Wales during the year 1899 numbered 581,799, and were in the proportion of 18·3 per 1000 of the population, against an average of 18·4 per 1000 in the ten years immediately preceding. (Table 3.)

Among registration counties the lowest death-rates were 12·9 per 1000 in Westmorland, 14·2 in Rutlandshire, 14·7 in Middlesex, and 14·9 in Cambridgeshire; the highest rates were 19·4 in London, in Durham, and in North Wales, 19·5 in Warwickshire, 19·6 in Staffordshire, 20·1 in Northumberland, and 21·1 in Lancashire. (Table 11.) The fact previously noted that the estimates of population are only provisional should be borne in mind here also.

Sex.—The 581,799 registered deaths in England and Wales included 299,472 of males and 282,327 of females. Among males the death-rate was equal to 19·5, and among females to 17·3, per 1000 living of each sex respectively. Both these rates are approximately equal to the respective averages in the ten years 1889–98. Out of equal numbers living there were 1128 deaths of males to 1000 deaths of females, against an average proportion of 1124 to 1000 in the ten years 1889–98. (Table 3.)

Ages at Death.—At all age-groups above 5 years the death-rates of both sexes were higher in 1899 than they had been in the previous year. Among females at ages between 10 and 35 years the increase was small—in two of these age-groups it does not even affect the last figure of the published rates; the increase was specially noticeable in the death-rates of both males and females above middle age, and was generally greater among males than among females. Among children under 5 years of age the rates were somewhat below those of 1898, but were slightly above the mean rates in the three years 1896–98. Comparison with the corresponding figures for a long series of years shows that the mortality has decreased among males under 45 years, and among females under 55 years of age, but has increased at other ages up to 85 years. Among persons over 85 years of age there has been an apparent decrease of mortality, but the accuracy of the *data* at these ages is doubtful. (Tables 13–14).

Taking together the figures relating to males and females, and using the average rates in the whole country as a standard, the following is a general summary of the results for the several registration counties. The rates in London exceeded the average at all age-groups but 15–20 and 20–25; in Staffordshire at all age-groups but those between 5 and 20 years; and in Warwickshire at all age-groups but those between 5 and 20 years and the group 55–65. With these exceptions, the mortality was below the average at nearly all age-groups in the counties of the second, third, fourth, fifth, sixth, and seventh Registration Divisions. Among the more northerly counties, Lancashire, Durham, and Northumberland showed excessive mortality at nearly all age-groups. In Cheshire, Cumberland, and Westmorland the rates were generally below the average. In the West Riding of Yorkshire the rates exceeded the average at all age-groups below 20 and above 45 years; in the East Riding they exceeded the average at ages under 5 years, and also at ages between 10 and 45 years; and in the North Riding they exceeded the average at ages between 15 and 45 years, but fell below it among children under 15 and among persons over 45 years. In Monmouthshire the mortality was excessive among children under 10 years, and slightly so at three other age-groups; in South Wales the rates were unfavourable at all age-groups under 35 years, but favourable at all other groups; and in North Wales the rates were above the average at ages between 10 and 35 years, but generally below the average at other age-groups. (Table 16.)

Infantile Mortality.—In the year 1899 the proportion of deaths of infants under one year of age to registered births was 163 per 1000, which is 12 per 1000 higher than the average proportion in the preceding ten years. In registration counties, infantile mortality per 1000 births ranged from 106 in Rutlandshire, 108 in Herefordshire, 109 in Westmorland, 114 in Wiltshire, 116 in Huntingdonshire, and 117 in Oxfordshire,

to 177 in Staffordshire, 178 in Durham, 181 in Northumberland, 182 in Nottinghamshire, 186 in South Wales, and 191 in Lancashire. (Table 11.)

The mortality of male infants was 176·6, while that of female infants was 148·0 per 1000 births of each sex respectively. In equal numbers born the deaths of males to the deaths of females in the first year of life were in the proportion of 119 to 100, the proportion in the years 1881 to 1898 having ranged between 120 to 100 and 123 to 100.

Urban and Rural Mortality.—At page cxv will be found two tables showing the variations in the death-rates during a series of years in the groups of districts which are taken to represent severally the urban and the rural portions of England and Wales. In the year 1899 the urban death-rate was equal to 19·2 per 1000, and the rural rate to 16·3 per 1000 of the respective populations. The urban rate was equal to the average of the ten preceding years, and the rural rate was lower than the average by 0·5 per 1000. In the year 1899 the ratio of urban to rural mortality was as 118 is to 100, against an average ratio of 114 to 100 in the ten years immediately preceding. (Tables 29, 30.)

Causes of Death.

In the year 1881 a new system of classification of causes of death, based on the second edition of the nomenclature of diseases issued by the Royal College of Physicians of London, was adopted in these Annual Reports. This change involved many important modifications; and in arranging the details of Tables 17 to 22 of the present Report the figures published in the Report for the year 1880 have been corrected, and made for the most part comparable with the figures for subsequent years. With regard to the year 1880, however, there still remain a few instances in which no satisfactory adjustment is practicable. In order to explain, as clearly as possible, the discrepancies between the old tables and the new, the following expedient has been adopted. Every heading in Tables 17–22 affected by a change of classification is marked with either an asterisk or a dagger, or with both. An asterisk denotes a change or changes in respect of which full correction has been carried out; a dagger denotes a change or changes in respect of which no correction, or only partial correction, has been practicable. All the headings thus affected appear in alphabetical order in a numbered list of diseases printed in the Fifty-seventh Annual Report (pp. lxxiv–ix.). Changes of classification are indicated in that list by means of reference numbers.

The deaths registered in 1899 and in each of the ten years immediately preceding, when distributed to the several "classes"

by their assigned causes, were equivalent to the rates shown in the following table :—

TABLE D.—ANNUAL RATES of MORTALITY from the SEVERAL CLASSES of DISEASES, per 1,000,000 PERSONS LIVING.

YEAR.	All Causes.	Zymotic Diseases.	Parasitic Diseases.	Dietetic Diseases.	Constitutional Diseases.	Developmental Diseases.	Local Diseases.	Violence.	Ill-defined and not specified Causes.
1889	18,221	2,455	25	67	3,224	1,550	9,392	614	894

Number of Deaths in 1899.	**581,799**	**89,235**	**389**	**3,280**	**98,421**	**53,963**	**291,581**	**21,815**	**23,115**

Zymotic or Specific Febrile Diseases.—The registered deaths in the year 1899 ascribed to this class of disease numbered 89,235, and were equal to 15·3 per cent. of the mortality from all causes. These deaths corresponded to a rate of 2,811 per million persons living, which is higher by 148 per million than the average rate in the ten years immediately preceding. As had also been the case in the two previous years the excess in zymotic mortality in 1899, compared with the average, was mainly due to the fatality of both influenza and diarrhœa, especially of the latter disease. (Tables 17–22.)

Small-pox.—In the year 1899 the deaths of 174 persons were returned as due to small-pox, being equal to a rate of 5 per million persons living. Of the total deaths from small-pox 143 occurred in the East Riding of Yorkshire, 13 in the West Riding, and 7 in Lincolnshire. As many as 141 of the 143 deaths in the East Riding belonged to the borough of Hull. Of the 13 deaths in the West Riding 8 occurred in the district of Doncaster. Of the 7 deaths in Lincolnshire 4 occurred in the district of Grimsby and 3 in that of Gainsborough. Only 4 of the 174 persons who died from small-pox were returned as vaccinated ; 5 were returned as unvaccinated ; and in 165 cases (including all those which occurred in Yorkshire) no

statement as to vaccination was contained in the certificate. In addition to the deaths definitely referred to small-pox 124 were referred to chicken-pox, and it is very possible that some of the latter may have been mistaken cases of small-pox. There were moreover 34 deaths that were attributed to the effects of vaccination. It thus appears that in the year 1899 the total number of deaths either certainly or possibly caused by variola, and of deaths alleged to have been caused by measures undertaken for the prevention of that disease, was 332, or 10 per million of the population.

The 34 deaths here recorded as due to "Effects of Vaccination" include not only the deaths that were directly referred to vaccination, but also those that were stated by medical attendants, or were found on enquiry, to have been caused by the entrance of any noxious material whatever at the site of vaccination. The mortality from the effects of vaccination, as thus defined, in proportion to the number of children vaccinated cannot yet be given for the year under present notice; but it appears from the Twenty-ninth Annual Report of the Local Government Board that the operation of vaccination was performed on 578,639 of the children whose births were registered in the year 1897, which is the latest for which such particulars are accessible. The number of deaths in 1897 classified under the heading "Effects of Vaccination" was 36, or one to every 16,073 vaccinated.

Measles.—In the year 1899 there were registered 9,998 deaths from measles, corresponding to a rate of 315 per million living at all ages. This is the lowest rate recorded since the year 1881; it is below the decennial average rate by 125 per million. Of the deaths from measles at all ages not fewer than 9,321, or 93 per cent., were those of children under five years old. These deaths were equal to a rate of 2,397 per million children living at that age. Among boys the mortality from measles was as usual higher than among girls, the rates being 2,466 and 2,328 per million respectively. The incidence of measles mortality among children differs from that of most other miasmatic diseases in this respect, that it is heaviest in the second year of life. This peculiarity has been noticed in a previous report.*

In the year 1899 the highest county rates per million at all ages from measles were 422 in Derbyshire, 423 in Cheshire, 469 in London, 495 in the North Riding of Yorkshire, 611 in Lancashire, and 674 in Nottinghamshire. No death from measles was registered in Rutlandshire during the year; in other counties the lowest rates were 13 in Cornwall, 18 in Herefordshire, 21 in Huntingdonshire, 30 in Westmorland, and 44 in South Wales. Of the 381 deaths registered during the year 1899 in the county of Nottingham, 350 occurred in a continuous area represented by the three registration districts of Mansfield, Nottingham, and Basford.

---

* Decennial supplement to the Registrar-General's 55th Report, Part I., page xxiv.

Scarlet Fever.—In the year 1899 the deaths from scarlet fever numbered 3,722, and were in the proportion of 117 per million of the population at all ages. With the exception of that for the immediately preceding year, this rate is the lowest on record, and is below the decennial average rate by not less than 66 per million. Of the total deaths from scarlet fever, 2,317, or 62 per cent., were those of children under five years old. The mortality at this age was therefore equal to 596 per million children living, as compared with an average rate of 948 per million in the ten years immediately preceding. As is the case with measles also, scarlet fever is more fatal to boys than to girls at this age, although the disparity is not so great. The counties with the lowest rates of scarlet fever mortality in 1899 were as follows:—Somersetshire 17 per million, Hertfordshire and Devonshire 18, Oxfordshire and Huntingdonshire 21, and Bedfordshire 23. The last five of these had been among the seven counties with the lowest scarlet fever rates in the year 1898 also. The counties with the highest rates of mortality from scarlet fever were the following:—Nottinghamshire 195, the West Riding of Yorkshire 199, Derbyshire and Lancashire 203, Durham 216, and Staffordshire 217.

During the year under notice the deaths of 398 London residents from scarlet fever were registered, either in London or in the Metropolitan Hospitals outside London. Of these deaths 329, or 83 per cent., occurred in public institutions, as against 68, 76, and 85 per cent. respectively in the three years immediately preceding.

Enteric (Typhoid) Fever.—During the year under notice the deaths from enteric fever of 6,304 persons, namely, 3,561 males and 2,743 females, were registered in England and Wales. The death-rate from this disease, which had risen from 156 per million in the year 1897 to 182 per million in the year 1898, further rose to 199 per million in the year 1899. Only once since 1884 has so high a rate been recorded; the average rate in the fourteen years 1885–98 was 175 per million.

Table E. (p. xxi) gives the average annual rates of mortality per million living at successive groups of ages in the ten years 1889–98, and also the rates in 1899.

The table shows that not only in the year under present notice, but also in previous years, enteric fever has been much more fatal generally to males than to females. In the ten years ending with 1898, the only age groups at which the mortality of females from enteric fever exceeded that of males were the groups between five years and 15; at all other ages males suffered more severely than females. Substantially the same statement applies to the year 1899. The last two columns in the table show the ages at which the increase of mortality in the year 1899 has been greatest. Among males the mortality from enteric fever at all ages exceeded the decennial average by 20 per cent., and at ages from 20 years to 55 it was in excess by proportions ranging from 21 to 39 per cent. Among females the mortality at all ages was in excess by 10 per cent., and at the successive ages ranging from 20 years to 65 the excess varied from 18 to 38 per cent.

TABLE E.—ENGLAND AND WALES. ENTERIC FEVER. MEAN ANNUAL MORTALITY per MILLION LIVING of each SEX, at successive GROUPS of AGES, in 1889–98 and in 1899.

Ages.	Males.		Females.		Difference per cent. in 1899.

65—75	93	86	58	49	— 7·5	— 15·5
75 and upwards.	41	23	29	29	— 43·9	—

The eight registration counties which suffered the highest death-rates from enteric fever in 1899 were:—South Wales, where the rate was 248 per million, Warwickshire 254, Monmouthshire 256, the West Riding of Yorkshire 257, Lancashire 262, Durham 290, Staffordshire 293, and Nottinghamshire 347. Four of these counties, namely, the West Riding, Lancashire, Durham, and Nottinghamshire had also been among the eight counties with the highest rates both in 1897 and in 1898.

In the West Riding of Yorkshire the area which had been indicated in former reports as one of exceptional mortality from enteric fever, was further extended in 1899; speaking approximately, it may be described as consisting of the southern half of the Riding. It probably contains more than three-fourths of the population; but so large a proportion of the enteric fever mortality occurred within it that, according to a rough calculation, it suffered about twice as severely from the disease as did the other portion of the West Riding. Out of the 196 deaths from enteric fever in Nottinghamshire, as many as 190 occurred in the four adjoining registration districts of Worksop, Mansfield, Basford, and Nottingham. Similar prevalence had been shown in this area in

the year 1898, and likewise in certain previous years. The incidence of fatal enteric fever in Durham, and in the neighbouring parts of Northumberland, and of the North Riding of Yorkshire, showed further changes during the year 1899. Table F., which is continued from previous reports, shows the annual rates in a continuous group of nineteen northern districts. Among districts

* The Newcastle Hospital for Infectious Diseases is situated in Tynemouth district; for the purposes of this table, deaths from enteric fever of Newcastle residents in this institution have been transferred to Newcastle-on-Tyne district.

which had suffered severely during some part of the nine years 1890–98, Guisborough, Darlington, Stockton, Sedgefield, and Hartlepool showed death-rates in 1899 which were considerably below the rate for the whole country. In a few other districts the rates differed but little from the general English rate; in South Shields, however, the mortality was equal to a rate of 327 per million, in Sunderland to 407, in Castle Ward to 450, and in Morpeth to 451, whilst in Auckland it rose to 725. All these districts, except Sunderland, showed an increase of the disease during 1899, as compared with 1898; in Sunderland the rate in the last-mentioned year had been still higher. In Staffordshire the greater part of the mortality from enteric fever again occurred in two groups of districts, namely, Stoke-upon-Trent together with Wolstanton, in the north part of the county, and Wolverhampton together with West Bromwich and Dudley, in the south. The district of Walsall, however, which in the previous year had been included with the last-named group as suffering excessively from this cause, showed diminished prevalence during the year under notice.

Diphtheria.—In the year 1899 the deaths referred to diphtheria (exclusive of croup, unless stated to be membranous) were 9,295 in number, and corresponded to a rate of 293 per million living; the rates in the preceding three years having been 292, 246, and 244 respectively. Among males at all ages the recorded mortality was equal to a rate of 290 per million living of that sex, and among females to a rate of 296 per million.

Diphtheria and Croup.—In the last annual Report it was stated that *at the present day* the order of distribution of fatal diphtheria is nearly the same, whether diphtheria alone or that disease and croup together be taken as the criterion. When comparing, however, the present fatality of diphtheria with its fatality in earlier years, or when investigating the local distribution of mortality from this cause within a given period of time, it becomes expedient to use the rates of death from diphtheria and croup together, so as to correct for differences of nomenclature.

During the year 1899 the total deaths at all ages from diphtheria and croup numbered 10,301, namely, 5,006 males and 5,295 females. The deaths were equal to a rate of 326 per million for the former sex, and of 324 per million for the latter.

Of the 10,301 deaths at all ages from diphtheria and croup, 6,585, or 64 per cent., were those of children under the age of five years. These deaths were equal to a rate of 1693 per million living at this age. Among male children the rate was higher by 4·4 per cent. than among female children.

The following figures, which represent rates per million living, show that diphtheria and croup are enormously

more fatal during the earlier years of life than at subsequent ages.

DIPHTHERIA AND CROUP.—RATES PER MILLION.

—	1896–98.		1899.	
	Under 10 years.	Over 10 years.	Under 10 years.	Over 10 years.
Persons	1,146	32	1,252	32
Males	1,146	31	1,230	30
Females	1,145	32	1,273	35

This table indicates that the increase of mortality in 1899, as compared with the previous three years, may be accounted for exclusively by excess in the deaths under ten years of age.

The local incidence of diphtheria and croup is shown in Table G., which gives, in addition to the separate rates of mortality from diphtheria and croup, the combined rate from the two affections, in each registration county of England and Wales.

Compared with the average mortality in extra-metropolitan England,* there were thirteen counties which showed excessive mortality in the year under notice. Arranged in decreasing order of fatality, the following counties suffered most severely :—South Wales, where the mortality was equal to 837 per million living; Leicestershire, 703 per million; and Monmouthshire, 658 per million. Among the thirteen counties with rates in 1899 above the average, there are at least four, namely, South Wales, Essex, London, and Kent, which had also suffered exceptionally in recent previous years. The mortality, however, of the last two of these counties was lower in 1899 than the mean for those counties in the previous three years. The heavy mortality recorded in Leicestershire and in Monmouthshire for 1899 appears to be exceptional; at any rate, these counties have not suffered from diphtheria and croup in any remarkable degree in any of the periods dealt with in Table F. of the Sixty-first Annual Report.

Out of a total of 1,217 deaths from diphtheria and croup registered in Monmouthshire and South Wales, not fewer than 1,015 occurred in the area covered by the following contiguous districts :—Bedwellty, Pontypool, Newport, Cardiff, Pontypridd, Merthyr Tydfil, Neath, and Swansea. This area includes the two areas referred to in the report for 1898, with the exception of the

* *i.e.*, England and Wales, excluding London.

district of Gower; it includes also the district of Neath in Glamorganshire, and the districts of Bedwellty, Pontypool, and Newport in Monmouthshire.

Of the 300 deaths in all that were referred to diphtheria and croup in Leicestershire, 238 occurred in the registration district or County Borough of Leicester.* The mortality from diphtheria and croup during 1899 in that borough was therefore equal to a rate of 1,113 per million of the population.

The four Kentish registration districts specially mentioned in the last annual report as areas of high diphtheritic mortality showed a decrease during 1899 in such mortality. This is especially noticeable in the districts of Strood and Tunbridge; but in the districts of Dartford and Medway the rate, although lower than in the previous year, still showed excess in the year under present notice. The last named two districts together with the four districts of Milton, Faversham, Maidstone, and Cranbrook, form three separate areas, probably containing about one-third of the population of the county. Nearly two-thirds of the deaths from diphtheria and croup in 1899, however, occurred within these areas. If the districts of Bromley, Sevenoaks, Malling, and Sheppey be added a continuous area of irregular shape is formed which contains about half the population of the county, and in which nearly 80 per cent. of the deaths from diphtheria and croup occurred. The rate of mortality in this area was therefore more than three times as high as that in the remainder of Kent.

The counties suffering least severely from diphtheria and croup were Devonshire, where the mortality was 120 per million; Westmorland, 119; Durham, 114; Cornwall, 110; and Oxfordshire, 98 per million. In the preceding three years, all these counties had likewise shown rates below that for extra-metropolitan England and Wales.

Whooping-cough.—The deaths from whooping-cough in the year 1899 numbered 10,129, and were in the proportion of 319 per million of the population at all ages. This rate, which is below the decennial average by 83 per million, is the lowest hitherto recorded, with the exception of the rate for the year 1895, which was 316 per million. Of the deaths from whooping-cough at all ages, not fewer than 9,862, namely, 4,515 of males and 5,347 of females, were below the age of five years. Among male children the mortality was equal to a rate of 2,334 per million living, and among female children to a rate of 2,736 per million. These rates were below the decennial averages respectively by 18·4 and by 20·9 per cent. Unlike measles, whooping-cough is much more fatal to infants in the first year of life than in the second.

In the year 1899 the highest county death-rates from whooping-cough were 389 per million in the East Riding of Yorkshire, 391 in Cumberland, 400 in Devonshire, 405 in Bedfordshire, 439 in Northumberland, and 511 in Norfolk. In Rutlandshire not a single

* This is one out of only 5 instances among the 33 great towns in which the Registration District corresponds as to area with the Urban District of the same name.

death was attributed to this disease in the course of the year; among other counties the lowest rates were 137 in Herefordshire, 136 in North Wales, 104 in Westmorland, and 94 in Dorsetshire.

Influenza.—12,417 deaths were referred to influenza in the year 1899. These deaths were equal to a rate of 391 per million living, which almost exactly corresponds with the average rate of the preceding nine years. Influenza appears to have been about equally fatal in the Metropolis and in the provinces, the rates having been 396 per million in London and 390 in the remainder of England and Wales. Among males influenza was responsible for a death-rate of 396 per million, and among females for a death-rate of 387 per million. The counties with the highest death-rates from influenza were North Wales, where the rate was equal to 629 per million; Huntingdonshire, 649; Somersetshire, 679; Sussex, 695; Shropshire, 707; and Herefordshire, 852. The last-named county had experienced the highest fatality from this disease in the immediately preceding year also, when the rate was equal to 1,167 per million of the population.

Diarrhœal Diseases.—In the year 1899 the deaths at all ages referred to diarrhœal diseases numbered 30,971, and were in the proportion of 975 per million of the aggregate population. This is the highest rate that has been recorded since 1893, in which year the rate was 999 per million.

In addition to the 30,971 deaths directly referred to diarrhœa, dysentery, and English cholera, not fewer than 19,253 deaths were attributed to enteritis, of which number 13,696 were certified as from gastro-enteritis. Ætiologically, all the infantile deaths referred to gastro-enteritis, and a large share of those referred to enteritis should undoubtedly be considered as cases of "Epidemic Diarrhœa," and the fact that the age incidence of these diseases, and especially that of gastro-enteritis, closely corresponds with that of "diarrhœa" strongly supports this view. In this connection the following figures are of interest. They show the rates of mortality in 1899 among children under five years, and among persons over five, per million persons living at these ages respectively.

RATES PER MILLION.

Deaths returned as from	Under 5 years.	Over 5 years
Diarrhœa, Dysentery, and Cholera ...	7,185	109
Enteritis	908	73
Gastro-Enteritis	3,192	46

In certifying deaths of this nature, the habit of discarding the commonplace term "diarrhœa" in favour of less familiar synonyms has grown more and more general during the last twenty years.

So long as the substitution was limited to such expressions as "intestinal catarrh," there was no difficulty in dealing with deaths thus certified; but within the last few years the use of other unauthorized synonyms has become fashionable among medical men. The terms gastro-enteritis and gastric catarrh, for example, are now used very commonly in place of diarrhæa, and inasmuch as deaths so certified are classed among affections of the digestive system, they do not appear at all in the zymotic group. Consequently the statistics with reference to a large and fatal group of epidemic diseases, which are of exceptional importance to medical officers of health, are in danger of becoming vitiated to such a degree as to be worthless* for preventive purposes.

In view of the foregoing consideration, the recent decision of the Royal College of Physicians of London on this subject may be regarded as particularly opportune.

The Royal College of Physicians, in response to an earnest appeal for its authoritative guidance concerning the certificates of death from diarrhœa, has now expressed an opinion which, if loyally adopted by medical men throughout the country, in granting certificates of death, will greatly improve the national records of mortality from this disease.

The Royal College of Physicians is convinced, after careful enquiry: (*a*) that various unauthorized and misleading terms, such as "gastro-enteritis," "muco-enteritis," "gastric catarrh," &c., are now commonly employed to designate the disease officially known as "epidemic diarrhœa,"† whereby its specific character is in danger of being ignored, and great confusion ensues; (*b*) that the present confusion of terms renders it impossible to determine accurately either the prevalence of the disease in special places and at special times, the extent to which it influences the public health, or the effects produced by sanitary measures; (*c*) that there is a widespread objection, on the part of medical practitioners, to the employment of the term "diarrhœa" in certifying the cause of death, probably because that term is generally held by the public to imply a mild disease, insufficient by itself to cause death.

The College, therefore, has sought to discover as an alternative for the authorized term (epidemic diarrhœa) some other name, which, whilst equally accurate, should convey to the public the idea of a more serious affection. But the College regards it as essential that the idea of specificity, intended to be conveyed by the term "epidemic," should be retained.

As the result of much deliberation, the College has agreed to authorize the use of the term "epidemic enteritis" (or if preferred by the practitioner, "zymotic enteritis"), as a synonym for epidemic diarrhœa. The College has further decided to urge

---

* In certain parts of England and Wales the deaths of infants attributed to enteritis and gastro-enteritis are in the aggregate more numerous than those attributed to diarrhœa.

† Nomenclature of Diseases by the Roval College of Physicians of London, page 9, ed. 1896.

upon practitioners the entire disuse, in medical certificates of death, of such terms as "gastro-enteritis," "muco-enteritis," or "gastric catarrh," as synonyms of epidemic diarrhœa.*

In the year 1899 diarrhœal diseases showed, as usual, the greatest fatality in counties which contain high proportions of urban population. Thus the rates amounted to 1,235 per million in Nottinghamshire, 1,277 per million in Staffordshire, 1,364 in Warwickshire, and 1,408 in Lancashire. The county rates of mortality did not exceed 163 per million in Westmorland, 238 in Herefordshire, 326 in Shropshire and in Cumberland, 328 in Rutlandshire, and 394 in Oxfordshire.

Hydrophobia.—The year 1899 is the first year on record in the course of which not a single death from hydrophobia is reported to have occurred. The numbers of deaths in the preceding five years were 13, 20, 8, 6, and 2, the average number in the ten years 1889-98 having been 10.

Puerperal fever was returned as the cause of death in 1,908 instances during the year, and other accidents of childbirth in 2,418. Taken together these deaths were in the proportion of 4·66 per 1,000 births. In the five years immediately preceding, the proportions per 1,000 had been 5·36, 4·57, 4·98, 4·61, and 4·41.

Parasitic Diseases.—The deaths referred to the diseases thus classified numbered 389, or 0·07 per cent. of the deaths from all causes. Of the total deaths from parasitic diseases, 275 were attributed to thrush, and the remainder to worms, hydatids, &c.

Dietetic Diseases.—The deaths attributed to dietetic diseases in the year 1899 were 3,280 in number, or 0·6 per cent. of the total deaths. The mortality from these diseases was equal to a rate of 103 per million persons living, without distinction of sex. This rate is higher than that of any other year on record; during the decennium 1889–98 the rate averaged 81 per million. Of the 3,280 deaths from dietetic diseases 2,871 were directly ascribed to intemperance,† *i.e.*, to "alcoholism" or "delirium tremens." The mortality from this cause alone was equal to a rate of 112 per million living among males, and to a rate of 70 per million among females; both these rates being the highest on record.

Constitutional Diseases.—The deaths referred to constitutional diseases in the aggregate during 1899 numbered 98,421. They were equal to 16·9 per cent. of the deaths from all causes, and to 3,100 per million of the population, without distinction of sex. The latter rate was slightly below the decennial average, viz., 3,164 per million.

---

* The above is summarized from the minutes of the Proceedings of the Royal College of Physicians of London, January 25 1900.

† Probably many other deaths were actually caused by intemperance, although they appear in the certificates as from "cirrhosis of the liver," neuritis, &c.

Cancer.—The deaths referred to cancer, or malignant disease, numbered 26,325,* and were equal to a rate of 829 per million persons living at all ages and of both sexes. Among males the mortality from cancer was equal to a rate of 672 per million living of that sex, and among females to a rate of 977 per million. Both these rates are the highest on record. The male rate exceeded the decennial average by 106 per million, or 18·7 per cent., and the female rate by 103 per million, or 11·8 per cent. According to Table H., out of a total of 26,325 deaths from malignant disease, 736 were attributed in the certificates to scirrhus, 1,293 to epithelioma, and 1,706 to sarcoma; the remainder, amounting to 86 per cent. of the whole, being referred to "cancer" or "malignant disease" simply, without further discrimination as to kind. This table also furnishes the means of determining the relative frequency with which cancer attacks the several parts or organs of the body,

* *i.e.*, the ratio of mortality in 1899 to that in 1889-98, the latter taken as 100.

* Of these deaths 760 were added to the total as a result of enquiries addressed to medical practitioners with regard to deaths from "tumour" or other imperfectly specified conditions.

both among males and among females. The part of the body affected by cancer was not stated as regards 4·6 per cent. of the deaths of males, nor as regards 4·7 per cent. of the deaths of females. The statistics of 1899 confirm those of previous years in showing that malignant disease is much more prevalent among women than among men; but, as in previous years, the excess is due to the unequal tendency of the disease to attack the female mammary and generative organs. As was shown to have been the case in 1897 and 1898, so has it been also in the year under present notice—when the deaths from cancerous affections of the ovaries, uterus, and breast are subtracted from the aggregate deaths of females from malignant disease, the remainder give a rate of mortality for females considerably below the male rate. In the year 1899 the male deaths from malignant disease, less the deaths from cancerous affections of the generative and mammary organs, corresponded to a rate of 659 per million males living, whilst the female rate, with the same limitations, did not exceed 590 per million.

Table J., on page xxxi, shows that the mortality from cancer is not very excessive until some period after the 25th year of age. As age advances, however, the mortality increases apace, until at ages above 75 years, males die of these affections at the rate of 6,815 per million, and women at the rate of 7,630 per million living at those ages.

Tubercular Diseases.—These diseases in the aggregate accounted for 60,659 deaths in the year under notice; they were equal to 10·4 per cent. of the deaths from all causes, and to 1,911 per million of the total population.

Pulmonary Phthisis was the assigned cause of 42,408 of the above-mentioned deaths, and was responsible for a mortality equal to 1,336 per million persons living at all ages and of both sexes. This rate is higher than that of 1898, but it is nevertheless lower than the average in the ten years 1889–98 by 118 per million. Table K. shows the male and female rates of mortality from phthisis at several age-groups in the year 1899, and for comparison with these, the corresponding average rates in the ten years immediately preceding. From this table it appears that in the year referred to phthisis was fatal, at all ages, to 1,554 per million of the male population and to 1,131 per million of the female; the male rate being lower by 5 per cent., and the female rate lower by 12 per cent. than the corresponding mean rates in the ten years immediately preceding. In both sexes the reduction in mortality has been greatest at ages under 35; at the higher ages, either the reduction has been but small, or else there has been an actual increase as compared with the average.

In England and Wales, as a whole, the total mortality of males from phthisis very considerably exceeds that of females. In the year under notice this was the case in London, and in 36 of the English and Welsh counties. In six counties, namely, Norfolk, Dorsetshire, Shropshire, Lincolnshire, Monmouthshire, and South Wales, the rates in the two sexes were practically

* *i.e.*, the ratio of mortality in 1899 to that in 1889–98, the latter taken as 100.

equal; but in Herefordshire and Rutlandshire exceptionally, the female rates were higher than the male. In the year 1899, the death-rates both among males and among females in extra-metropolitan England, as a whole, were below the means of the seven years 1891–97, the rate among females being especially so. In London the male death-rate was above, but the female rate was slightly below, the average. In 28 of the remaining English counties the male death-rates, and in 38 counties the female rates, were below the respective averages. These counties are not in all cases the same as those similarly indicated in the previous annual report. In the three Welsh counties both male and females rates were below the average. This had also been the case in the year 1898.

Tabes Mesenterica was the stated cause of death in 6,294 instances during the year under notice, and accounted for a death-rate of 198 per million of the population at all ages. Among male children under five years of age the mortality thus returned was equal to a rate of 1418 per million living at that age, and among female children of the same age, to a rate of 1126 per million. These rates are in both cases somewhat lower than those of recent previous years.

Tubercular Meningitis was returned in the year under notice as the cause of 6,449 deaths, which corresponded to a rate of 203 per million of both sexes and at all ages. Among male children under five years the mortality from this disease was equal to a rate of 1,326 per million living, and among female children of the same age to a rate of 1,046 per million. Both these rates are below the average. The disproportionate liability of male children to tubercular meningitis is very striking; it is shown by the following figures which represent excess per cent. of male over female mortality under five years of age, in the years 1890–99.

All causes	19·0	per cent.
Tubercular meningitis	29·4	"
Other forms of tuberculosis	21.7	"
Inflammation of brain and its membranes*	22·9	"

Male children under 5 years old died from all causes at the rate of 61·4 per 1000 living at this age; and female children at the rate of 51·6 per 1000: accordingly the former died faster than the latter by 19 per cent. But the figures here given show that male children at this age died from tubercular meningitis faster than female children by as much as 29·4 per cent. Careful study of these figures suggests the expediency of considering the exceptional susceptibility of male as compared with female children to tubercular meningitis, in relation to their noticeable though less pronounced over-liability to other types of tubercular disease, and also to those forms of meningeal inflammation which are not designated tubercular in the certificates of death.

Diabetes was the assigned cause of 2,718 deaths in the year under notice, giving a rate of 86 per million living, without distinction of age or sex. The mortality from diabetes among males was equal to a rate of 94 per million, and among females to a rate of 78 per million; these rates being respectively 15 and 28 per cent. in excess of the average rates in the preceding ten years.

In view of the continued increase which has taken place in the fatality of diabetes in recent years, the following table (Table L.) has been constructed to show the incidence of fatal diabetes at several ages, and also the varying rates at which the disease has increased in recent years among males and females at those ages, respectively.

Comparing the decennial period 1890–99 with the period 1861–70, it appears that among males at all ages the fatality of diabetes has fully doubled since the earlier period, whilst among females it has more than trebled. Both sexes are shown by the table to have sustained increased mortality from diabetes at every stage of life, but the rate of increase has been very much greater

---

* Almost all the deaths of children which are classified in the tables as from "Inflammation of the brain and its membranes," appear in the certificates as due to "meningitis."

* *i.e.*, the ratio of mortality in 1890–99 to that in 1861–70, the latter taken as 100.

at the higher ages than it has been during the prime of life. The increase of mortality per cent. from this disease among females over 75 years is especially noteworthy.

Developmental Diseases.—To one or other of the causes included under this heading 53,963 deaths were referred in England and Wales during the year 1899. These deaths were equal to 9·3 per cent. of the deaths from all causes, and to a rate of 1,701 per million living of both sexes. Of the above-mentioned deaths, as many as 31,477 (namely, 13,522 of males and 17,955 of females) were attributed to "Old age" simply. The mortality from old age was therefore equal among men to a rate of 879 per million, and among women to a rate of 1,097 per million. (Tables 17–22.) To premature birth, 18,548 deaths were attributed; a number equal to 19·97 per thousand children born, which is the highest proportion on record, the average in the ten years 1889–98 having been 18·42. The mortality ascribed to congenital defects was equal to 4·24 per 1000 births, as compared with an average rate of 3·85 per 1000 in the previous ten years.

Local Diseases.—The deaths from diseases thus classified numbered 291,581 in the course of the year 1899, amounting to rather more than half of the deaths from all causes; they were equal to a rate of 9,188 per million persons living, against an average rate of 9,360 per million in the ten years which ended with 1898.

Diseases of the nervous system (exclusive of convulsions) caused 47,910 deaths, corresponding to a rate of 1,509 per million persons living. The male rate was 1,562 per million or 5·0 per cent. below, and the female rate was 1,459 per million or 5·3 per cent. below, the decennial average, for each sex respectively.

Diseases of the heart and circulatory system accounted for 54,170 deaths, corresponding to a rate of 1,708 per million persons living. Among males the rate was 1,682 per million living, or 2·9 per cent. above the average, and among females it was 1,731, or 2·8 per cent. above the average.

Taking one year with another, it appears that diseases of the circulatory system cause somewhat heavier mortality, at all ages, among females than among males. If, however, our observations are limited to the year 1899, we find that although females under 25 years of age die about 17 per cent. faster than males, yet, at ages above 25 years, males fall victims faster than do females by about 2 per cent. If the mortality from the separate forms of circulatory disease be compared, important differences will be found to exist. For whilst on the one hand females suffer more severely than males from valvular diseases of the heart, and much more severely from embolism, varicose veins, and phlebitis; on the other hand, males sustain a heavier mortality from pericarditis, from cardiac hypertrophy, and from senile gangrene; whilst they succumb to angina pectoris nearly twice as fast, and to aneurism more than four times as fast as do the opposite sex.

The deaths from *diseases of the respiratory system* (exclusive of croup) numbered 100,830, and corresponded to a rate of 3,177 per million persons living at all ages. Among males the rate was equal to 3,496 per million, or 303 per million below the decennial average; and among females to 2,876 per million, or 267 per million below the average.

Diseases of the urinary system accounted for the deaths of 15,374 persons, or 485 per million living. This number includes 11,657 deaths that were referred to acute nephritis and Bright's disease, under which terms, collectively, it will be seen that the greater part of the deaths referable to diseases of the kidneys are included. In recent times the mortality referred to these latter affections has steadily increased. In the year 1899 the rate among males was equal to 407 per million, and among females to 330 per million. Since the last completed decennium male mortality from kidney diseases has increased by 28 per cent., and female mortality by 34 per cent. The experience of 1899 therefore tallies with that of 1881–90, in showing that the proportional increase in the fatality of kidney diseases is greater among females than among males.

Violence.—During the year under notice, 18,665 persons (12,965 males and 5,700 females) met their death by *accident or negligence*, the mortality thus returned being 589 per million, or 5·7 per cent. above the average. Among males the rate was 844 per million or 4·6 per cent. above the average, and among females it was 347 per million, which is 7·8 above the average. To *suicide* the deaths of 2,121 men and 723 women were attributed; these figures corrected for increase of population correspond closely with the average. 143 males and 148 females fell victims to *homicide*, these numbers being in each case somewhat below the corrected average. Of the 291 cases of homicide, 152 were returned by the coroners' juries as *murder*. There were 15 executions during the year 1899; the numbers in the three preceding years having been 20, 7, and 10 respectively.

Ill-defined and Not Specified Causes.—In the course of the year under notice the causes of 23,115, or 4 per cent. of the total deaths, were stated so unsatisfactorily in the registers as to be worthless for purposes of classification. Ill-defined deaths would have appeared in much larger proportions than at present had it not been for the enquiries which are systematically issued from this office to medical practitioners, respecting deaths certified as due to tumour, dropsy, mortification, hæmorrhage and certain other indefinite conditions. In the course of the year, 3,513 answers to letters of enquiry were received at this office, with the result that the deaths under the heading "Tumour" (organ not stated) were reduced from 238, at which number they originally stood, to 81, the deaths from dropsy (without specification of cause) were reduced from 277 to 210, the deaths from pyæmia from 541 to 336, those from peritonitis from 2,246 to 1,994, and many other deaths indefinitely described in the original certificates were reduced in like proportion. The 1,194 enquiries with regard to tumours resulted in the transference of 589 deaths to cancer, 123 to tuberculosis, 97 to syphilis, 22 to ovarian and uterine diseases, and 32 to other definite causes. The 326 enquiries concerning deaths referred to pyæmia led to the transference of 43 deaths to puerperal fever, 10 to venereal diseases, 66 to diseases of the local class, 69 to injuries of various kinds, and 17 to other specified causes. The 414 enquiries relating to deaths from peritonitis resulted in the transference of 69 deaths to puerperal fever, 25 to tuberculosis, 35 to diseases of the generative system, and 123 to other definite causes. The 212 enquiries concerning strictures of the œsophagus and pylorus resulted in the addition of 150 deaths to the heading "Cancer." The total additions to the undermentioned headings, which resulted from the enquiries above referred to, were as follows:—To cancer 760 deaths, to tuberculosis 179, to puerperal fever 146, to syphilis 115, and to alcoholism 51. In 182 instances the condition stated in the certificate was found to be due to accident, whilst in 161 other instances, in which such indefinite terms as "fracture," injury, &c., had been inserted in the certificate, the deaths were ultimately classed in accordance with the nature of the injury.

Certification of Cause of Death.

Of the 581,799 deaths which were recorded in England and Wales during the year 1899, the causes of 534,446, or 91·86 per cent., were certified by registered medical practitioners; inquests were held respecting 36,608, or 6·29 per cent.; whilst the causes of the remaining 10,745, or 1·85 per cent., were uncertified.

The proportion of medically certified deaths was somewhat less than it had been in 1898, but was higher than the proportion in any earlier year for which the figures can be ascertained. The proportion of inquest cases showed an increase on that for 1898, whilst uncertified deaths formed a smaller proportion of the total mortality than in any previous year on record.

The following table gives a summary of the changes in respect of certification of causes of death since 1878 :—

Table M.—Certified and Uncertified Deaths, and Inquest Cases, in England and Wales, 1878–99.

Year.	Proportions in 100 Deaths Registered.		
	Certified by Registered Medical Practitioners.	Inquests.	Uncertified.
1878–82...	90·47	5·17	4·36
1883–87...	91·10	5·40	3·50
1888–92...	91·53	5·61	2·86
1893–97...	91·56	6·12	2·32
1898	91·92	6·19	1·89
1899	91·86	6·29	1·85

In registration counties (reckoning for this purpose, as separate counties, the parts of London which lie to the north and to the south of the Thames) the proportions of medically certified deaths ranged from 89·25 per cent. in Northern London, 89·37 in Herefordshire, 90·83 in the East Riding of Yorkshire, 90·88 in Shropshire, and 90·99 in Leicestershire, to 92·94 in Buckinghamshire, 92·97 in Norfolk, 93·23 in Sussex, 93·29 in Nottinghamshire, 93·39 in Bedfordshire, and 93·48 in Monmouthshire. (Table N.) These figures must not, however, be taken as representing the relative amounts of medical attendance in different parts of the country. For varying proportions of cases which have been medically attended—notably, many in which death has resulted

from the effects of injuries—are made the subject of coroners' inquiries, and are accordingly registered on their certificates. Since therefore the proportions of inquest cases in the year were, on the one hand, as low as 3·76 per cent. of the total deaths in North Wales, 4·27 in Bedfordshire, 4·29 in Northamptonshire, and 4·46 in Westmorland, and, on the other hand, as high as 7·38 in Wiltshire, 7·49 in Gloucestershire, 7·71 in the East Riding of Yorkshire, and 10·63 in Northern London; and further, since the proportions of inquests held on deaths from violence as well as on deaths from disease also vary widely in different parts of the country—it is possible that a comparatively low proportion of medically certified causes of death may be associated with a comparatively high proportion of persons medically attended in their last illness.

More definite inferences may be drawn from the columns for uncertified deaths in Table N. Uncertified deaths formed only 0·12 per cent. of the total in Northern London, and less than 1 per cent. in Sussex, in Middlesex, and in Monmouthshire; but they were 3·09 per cent. of the deaths in Shropshire, 3·28 in Kent, 3·65 in North Wales, 4·01 in Westmorland, and 5·37 in Herefordshire. Table O. gives a list of the registration districts in England and Wales in which the proportion of uncertified to total deaths was highest during the year under notice. The districts, 55 in number, show in each case a percentage of uncertified deaths amounting to more than double, and in one instance to more than nine times, the average in the country generally.

In England and Wales as a whole more than three-fourths of the uncertified deaths were brought under the notice of coroners, who declined to hold inquests concerning them; and in several counties nearly all the uncertified deaths were so reported. For example, out of 489 uncertified deaths in Kent, and 409 in Warwickshire, 469 and 382 respectively were reported to coroners. In the North Riding of Yorkshire, however, and in the three registration counties of the Welsh Division, less than half of the uncertified deaths were so reported. The percentage of deaths which were neither medically certified nor reported to coroners was 0·40, or 1 death in every 250; and it ranged from 0·04 in Northern London, 0·10 in Dorsetshire, 0·13 in Kent, and 0·16 in Warwickshire, to 0·90 in Durham, 0·96 in the North Riding of Yorkshire, 0·99 in Rutlandshire, 1·62 in South Wales, and 1·98 in North Wales.

The assigned causes of the 10,745 uncertified deaths are shown in Table P. on page xlii. in conjunction with sex and with age; the table also shows, under each of the assigned causes, how many were reported and how many were not reported to coroners. The table indicates the same general features as similar tables in previous reports have indicated, viz., that uncertified causes of death are most numerous among young children and least numerous among persons at ages 15–25; that the excess among infants is specially marked in those cases which have not been reported to coroners; that premature birth, convulsions, atrophy and debility are the prevailing assigned causes of uncertified deaths among children, and old age, apoplexy or paralysis, circulatory diseases, and

bronchitis are the prevailing assigned causes among old people; the table further indicates that the bulk of the uncertified deaths referred to old age, to apoplexy, paralysis, epilepsy, or convulsions, to circulatory or respiratory diseases, or to dentition are reported to coroners before registration.

Offences against the Registration Acts.

In 1899, 17 persons, on prosecution by order of the Registrar-General, were convicted of different offences against the Registration Acts, as under :—

For giving false information for registration ...	11
For giving false information for the registration of adopted children	2
For causing a fictitious entry to be made in a birth register	1
For failing to comply with requisition to register	2
For presenting a false and forged medical certificate at the registration of a death	1

Progress of Registration.

The names in the alphabetical indexes of births, deaths, and marriages recorded in the national registers of England and Wales were increased during the year 1899 by 2,035,113, this addition raising the aggregate number of names in the indexes, which at the end of 1899 embraced a period of 62½ years, to 98,753,400.

Searches and Certificates.

Besides the certified copies of the registered births, deaths, and marriages kept in England and Wales pursuant to the Registration Acts of 1836 and 1874, a large number of other registers and records are deposited in the custody of the Registrar-General under statutory and other arrangements. A list of all these various registers and records will be found on pages xxix.-xxxii. of the Fifty-eighth Report. Searches may be made in any of these registers, and certificates obtained of entries found, on payment of the prescribed fees.

During the 52 weeks ended 30th December 1899 the total number of searches was 57,670, and certificates were issued to the number of 44,793; the total amount received in fees for searches and certificates was 8,551*l.* 19*s.* 6*d.*

The following figures indicate that as time progresses the records in this Office are being utilized by the public more

and more extensively for legal evidence of births, deaths, and marriages :—

Years.	Total Searches.	Certificates Issued.	Amount Received.
			£ s. d.
1866 (complete year) ...	12,135	10,017	1,860 15 6
1875 (52 weeks)	26,356	20,282	3,879 15 6
1885 (52 weeks)	36,450	27,682	5,317 13 6
1895 (52 weeks)	53,289	35,727	7,200 12 6
1896 (53 weeks)	57,444	37,435	7,600 0 6
1897 (52 weeks)	58,664	37,485	7,686 8 6
1898 (52 weeks)	63,825	41,143	8,450 19 6
1899 (52 weeks)	57,670	44,793	8,551 19 6

Mortality in the Army.*

The average strength of the Army at home and abroad in 1899 was 238,739, and the deaths during the year were 2,516, giving a death-rate of 10·5 per 1000 against 8·4, 10·0, and 12·0 in the preceding three years. The mortality in the Army abroad was 15·5 per 1000, against an average of 14·1 per 1000 in the five years 1894–98, while that in the Army at home was 4·5 per 1000, against an average of 4·2 in the same five years. (Table 34.)

Mortality in the Navy.†

The average force afloat was 89,180. The deaths during the year numbered 483, being in the proportion of 5·4 per 1000 of the strength. Of the 483 deaths, 346 were due to disease and 137 to violence ; the death-rate from disease was therefore 3·9 per 1000, and that from violence 1·5 per 1000. Of the 137 deaths from violence, 126 were accidental and 11 were suicidal ; the accidental deaths include 52 from drowning and 6 from heat-stroke.

Births and Deaths at Sea.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874 and the Merchant Shipping Act of 1894, Commanding Officers of Ships trading to or from British Ports are required, under penalty, to transmit returns of all births and deaths

* Based upon returns furnished by the Commander-in-Chief.
† From the Statistical Report of the Health of the Navy for the year 1899.

occurring on board their ships to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of Births and Deaths for England, Scotland, and Ireland. Similar returns are furnished by persons having charge of Her Majesty's Ships directly to the Registrars-General of Births and Deaths. These returns of births and deaths at sea constitute the "Marine Register Book." During the year 1899, this book was increased by the addition of 148 entries of birth and 2,584 entries of death.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of masters and seamen afloat during the year 1899, in vessels belonging to the Mercantile Marine of the United Kingdom (including the islands in the British seas) and registered under the Merchant Shipping Acts, was 230,372, being 1013 less than in the preceding year. The reported deaths numbered 2929, showing a rate of 12·7 per 1000 of the strength. This rate was 0·2 per 1000 below the mean rate in the five years 1894–98. (Table 36.)

International Vital Statistics.

In Tables 43–60 will be found international statistics concerning the marriages, births, and deaths in the United Kingdom and in the principal States on the continent of Europe. In all the foreign countries from which returns for the year 1899 have been received, with the exception of Norway and Switzerland, the birth-rates during that year were lower than the respective averages for the 25 years 1874–98. The death-rates of all the countries, excepting Norway and Sweden, were lower than the averages for the same period of 25 years, and the rates in Hungary, Switzerland, and Italy were also lower than the rates in 1898; but the mortality in all the other countries was higher in 1899 than it had been in the previous year.

I have the honour to be,
Sir,
Your faithful Servant,

Reginald MacLeod,
Registrar-General.

General Register Office, Somerset House,
31st December, 1900.

MARRIAGE ACT, 1898.

[61 *and* 62 *Vict.*, *cap.* 58.]

CHAPTER 58.

A.D. 1898.

An Act to amend the Law relating to the Attendance of Registrars at Marriages in Nonconformist Places of Worship.

[12th August 1898.]

BE it enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows :

Short title and construction.

1.—(1.) This Act may be cited as the Marriage Act, 1898, and may be cited with the Marriage Acts, 1811 to 1886.

6 & 7 Will. 4. c. 85.

(2.) The term "registered building," wherever used in this Act, shall mean any building registered for solemnising marriages therein under the Marriage Act, 1836.

(3.) For the purposes of this Act, as applied to Roman Catholic registered buildings, the words "trustees or governing body" shall include the bishop or vicar general of the diocese.

Extent of Act.

2. This Act shall not extend to Scotland or Ireland.

Commencement of Act.

3. This Act shall come into operation on the first day of April one thousand eight hundred and ninety-nine.

Solemnisation of marriages without presence of registrar.

4. Notwithstanding anything contained in section twenty of the Marriage Act, 1836, marriages may be lawfully solemnised in the registered building named in the notice of the marriages and in the superintendent registrar's certificate or certificate and licence issued pursuant to the provisions of the said Act, or any Act amending the same, between and by the parties described in the notice and certificate or certificate and licence, according to such form and ceremony as they may see fit to adopt, without the presence of any registrar, but in the presence of such duly authorised person as herein-after mentioned, and subject in all other respects, excepting as is herein provided, to all the conditions and provisoes contained in the said Act and any Acts amending the same.

Notices and forms.

5.—(1.) Whenever a marriage is intended to be solemnised in a registered building, and the parties intending to contract the marriage have duly fulfilled all the conditions from time to time required by law to entitle the superintendent registrar to issue a certificate or certificate and licence authorising the marriage, and the superintendent registrar does not receive notice, at the time when the form of notice of marriage as required by law is given to him, that the parties intending to contract the marriage require a registrar to be present at the marriage, the superintendent registrar shall, subject to the provisions of this Act, issue under his hand to one of those parties a certificate, or certificate and licence, as the case may require, in accordance with the forms set forth in Schedules B. and C. annexed to the Marriage and Registration Act, 1856.

19 & 20 Vict. c. 119.

(2.) The superintendent registrar shall at the same time give to one of the parties intending to contract the marriage printed instructions in the prescribed form for the due solemnisation of the marriage.

A.D. 1898

Declarations to be made in presence of authorised person.

6.—(1.) Where a marriage is solemnised under this Act each of the parties contracting the marriage shall in some part of the ceremony make the following declarations :—

"I do solemnly declare that I know not of any lawful impediment why I, *A.B.*, may not be joined in matrimony to *C.D.*"

And each of the parties shall say to the other the words following :—

"I call upon these persons here present to witness that I, *A.B.*, do take thee, *C.D.*, to be my lawful wedded wife [or husband]."

or in lieu thereof the words following :—

"I, *A.B.*, do take thee, *C.D.*, to be my wedded wife [or husband]."

(2.) The aforesaid declaration shall be made in the presence of the authorized person herein-after mentioned and two or more witnesses.

(3.) No marriage under this Act shall be solemnised in any registered building except in the presence of a person (in this Act referred to as an authorised person) certified as having been duly authorised for the purpose by the trustees or other governing body of the building, or of some registered building in the same registration district.

(4.) Where a person has been so authorised in respect of any registered building, the trustees or governing body of that building shall, within the prescribed time and in the prescribed manner, certify the name and address of the person or persons authorised for that building to the Registrar General and to the superintendent registrar of the district in which the building is situate.

Register books and returns.

7.—(1.) In the case of the solemnisation of a marriage under this Act, the certificate or certificate and licence required by law shall be delivered to the authorised person in whose presence the marriage is solemnised, who shall, immediately after the marriage, register in duplicate in two of the marriage register books provided for the purpose the several particulars relating to the marriage according to the form in Schedule C. annexed to the Births and Deaths Registration Act, 1836, and every such entry shall be signed by the authorised person, and by the parties to the marriage, and by two witnesses ; and all such entries shall be made in consecutive order from the beginning to the end of each book, and the numbers of the place of entry of each duplicate marriage register book shall be the same.

6 & 7 Will. 4. c. 86.

(2.) The Registrar General shall, when so requested by the authorised person, or the trustees or governing body of any registered building in which marriages may be solemnised under this Act, supply a sufficient number, in duplicate, of such marriage register books and forms for certified copies thereof as may be required for the purposes of this Act.

(3.) A marriage under this Act shall not be solemnised in any registered building until duplicate register books have been so supplied.

(4.) If the Registrar General is not satisfied with respect to any building registered, or proposed to be registered, for the solemnisation of marriages therein, that sufficient security exists for the due registration of marriages under this Act and for the safe custody of marriage register books, he may in his discretion attach to the

A.D. 1898.

continuance on the register or registration of the building a condition that no marriages under this Act shall be solemnised therein.

6 & 7 Will. 4. c. 86.

(5.) Section thirty-five of the Births and Deaths Registration Act, 1836, shall apply in the case of a person having the custody of a marriage register book under rules made in pursuance of this Act, in like manner as it applies in the case of a rector, vicar, or curate.

Custody of certificate and licence.

8. The certificate or certificate and licence, as the case may be, shall be kept in the prescribed custody, and shall be produced with the marriage register books as and when required by the Registrar General.

Fees. 6 & 7 Will. 4. c. 85. 19 & 20 Vict c. 119.

9. The fees payable to the superintendent registrars under the Marriage Act, 1836, and the Marriage and Registration Act, 1856, in respect of marriages, whether with or without licence, shall be payable in respect of marriages under this Act.

Saving for right to require attendance of registrar.

10. Where the contracting parties give notice to the superintendent registrar that it is the wish of the parties to be married in the presence of the district registrar, nothing in this Act contained shall relieve the registrar from attendance at such marriage as now by law required and the fulfilment of the duties now imposed by law, and in case of such attendance the registrar shall be entitled to the fees now authorised by law.

Provisions as to registers and certified copies.

11.—(1.) The authorised person for a registered building shall, in the months of April, July, October, and January respectively, make and deliver to the superintendent registrar of the district in which the registered building is situate, on forms supplied by the Registrar General, a true copy certified by him under his hand of all the entries of marriages in the register book since the date of the last certified copy, and if there has been no marriage registered in the book since that date, shall certify the fact under his hand on a form to be supplied by the Registrar General, and shall in accordance with rules under this Act keep the marriage register books safely until they are filled.

(2.) The superintendent registrar shall pay or cause to be paid to the authorised person the sum of sixpence for every entry contained in the said certified copy, and this sum shall be reimbursed to the superintendent registrar by the board of guardians of the union for which he is appointed.

(3.) When any such register book is filled, one copy thereof shall be delivered to the superintendent registrar of the district in which the registered building is situate, and the other shall be kept in the prescribed custody.

7 Will. 4. and 1 Vict. c. 22.

(4.) Section twenty-nine of the Births and Deaths Registration Act, 1837, shall apply in the case of an authorised person in like manner as it applies in the case of a rector, vicar, or curate.

(5.) Every superintendent registrar shall four times in every year send to the Registrar General the certified copies received by him under this section in the same manner and under the same conditions as are directed with respect to the certified copies of marriages solemnised in churches and chapels under the Births and Deaths Registration Act, 1836.

6 & 7 Will. 4. c. 86.

Offences.

12. If any authorised person refuses or fails to comply with this Act, or the enactments or regulations for the time being in force

with respect to the solemnisation and registration of marriages, he shall be guilty of an offence under this Act, and shall be liable, on summary conviction, to a penalty not exceeding ten pounds, or on conviction on indictment to imprisonment with or without hard labour for a term not exceeding two years or to a fine not exceeding fifty pounds, and shall, upon conviction, cease to be an authorised person.

Saving for Society of Friends and Jews.

13. Nothing in this Act shall be taken to relate or have any reference to marriages solemnised in accordance with the practice and usages of the Society of Friends or of persons professing the Jewish religion.

Provisions for marriage in the Welsh tongue.

14. Section twenty-three of the Births and Deaths Registration Act, 1837, relating to marriages in the Welsh tongue, shall apply in the case of marriages under this Act.

Repeal. 6 & 7 Will. 4. c. 85.

15. So much of sections thirty-nine and forty-two of the Marriage Act, 1836, as punishes the solemnisation of or renders void any marriage by reason of the absence of the registrar is hereby repealed in respect of any marriage authorised by and solemnised in accordance with this Act.

Rules.

16. The Registrar General may, with the approval of the Local Government Board, make rules with respect to—

(*a.*) The forms to be used for the purposes of this Act ;

(*b.*) The custody of documents required for the purposes of this Act ;

(*c.*) The duties of registrars, superintendent registrars, and authorised persons under this Act ;

(*d.*) Any matter which may under this Act be prescribed ;

and generally for carrying into effect the provisions of this Act.

Temporary provision as to fees.

17.—(1.) On the issue of any certificate for a marriage to be solemnised in accordance with this Act, the parties to the marriage shall pay to the superintendent registrar of the district in which the registered building selected for the marriage is situate, an additional fee of six shillings and sixpence if the marriage is by licence, and otherwise a fee of four shillings. Provided that not more than one such fee shall be paid in respect of any one marriage.

(2.) Where there is only one registrar of marriages for the district, who was appointed before the passing of this Act, the superintendent registrar shall, at the end of each quarter, pay the fees so received by him to that registrar, and where there are more such registrars he shall, at the end of each quarter, divide the amount of the fees so received by him among those registrars in accordance with rules to be made under this Act.

(3.) This section shall not continue in force for more than ten years from the commencement of this Act, and shall not apply to a district unless there is acting therein a registrar of marriages appointed before the passing of this Act.

Remarks on the Meteorology of the Year 1899.

By James Glaisher, Esq., F.R.S., &c.

The following remarks, both with regard to atmospheric pressure and temperature, are based on observations made near London, but they may be taken as having a general application :—

Atmospheric Pressure.—The readings of the barometer were generally below their averages from January 1st to the 23rd, being particularly so on January 1st and 2nd, when it was as much as 0·83 in. and 0·96 in. respectively below ; the mean daily deficiency for the 23 days was 0·23 in. ; from January 24th to the 29th it was above, being as much as 0·72 in. and 0·68 in. in excess on January 25th and 26th respectively ; the mean daily excess for the 6 days ending January 29th was 0·46 in.; from January 30th to February 16th it was below, being particularly so on February 8th, 12th, and 13th, when it was as much as 0.51 in., 0·63 in., and 0·71 in. respectively below ; the mean daily deficiency for the 18 days was 0·33 in. ; from February 17th to March 3rd it was above, being as much as 0·57 in., 0·69 in., and 0·63 in. in excess on February 27th and 28th and March 1st respectively ; the mean daily excess for the 15 days ending March 3rd was 0·33 in.; from March 4th to the 10th it was generally below, being as much as 0·63 in. and 0·88 in. below on the 8th and 9th respectively ; the mean daily deficiency for the 7 days ending March 10th was 0·31 in. ; from March 11th to the 19th it was above, the mean daily excess being 0·32 in. ; from March 20th to the 23rd it was below, the mean daily deficiency being 0·22 in. ; from March 24th to April 6th it was above, the mean daily excess being 0·16 in. ; from April 7th to the 16th it was below, being as much as 0·64 in., 0·74 in., 0·88 in., and 0·60 in., below on April 7th, 13th, 14th, and 15th respectively ; the mean daily deficiency for the 10 days ending April 16th was 0·42 in. ; from April 17th to the 23rd it was generally above, the mean daily excess being 0·18 in. ; from April 24th to the 29th it was generally below, the mean daily deficiency being 0·21 in. ; from April 30th to May 8th it was generally above, the mean daily excess being 0·25 in. ; from May 9th to the 18th it was generally below, the mean daily deficiency being 0·13 in. ; from May 19th to June 17th it was generally above, the mean daily excess being 0·21 in. ; from June 18th to the 23rd it was below, being as much as 0·75 in. below on the 20th, the mean daily deficiency was 0·34 in. ; from June 24th to the 27th it was above, the mean daily excess being 0·20 in. ; from June 28th to July 3rd it was below, the mean daily deficiency being 0·39 in. ; from July 4th to August 26th it was generally above, the mean daily excess being 0·17 in. ; from August 27th to October 2nd it was generally below, the mean daily deficiency being 0·17 in. ; from October 3rd to the 26th it was generally above, being as much as 0·53 in., 0·52 in., and 0·52 in. in excess on October 8th, 19th, and 21st respectively; the mean daily excess for the 24 days ending October 26th was 0·29 in. ; from October 27th to November 10th it was generally below, the mean daily deficiency being 0·15 in. ; from

November 11th to December 5th it was above, being particularly so on November 16th, 17th, and 18th, when it was as much as 0·73 in., 0·80 in., and 0·73 in. respectively in excess, and on several other days during this period it was more than half an inch above its average, the mean daily excess for the 25 days ending December 5th was 0·49 in.; from December 6th to the 8th it was below, the mean daily deficiency being 0·13 in.; from December 9th to the 11th it was above, the mean daily excess being 0·20 in.; from December 12th to the 17th it was below, the mean daily deficiency being 0·16 in.; from December 18th to the 23rd it was above, the mean daily excess being 0·16 in.; and from December 24th to the 31st it was below, being as much as 0·78 in., 1·44 in., and 0·89 in. below on the 28th, 29th, and 30th respectively, the mean daily deficiency for the 8 days ending December 31st was 0·58 in.

The highest reading of the barometer at the height of 159 feet above the sea was 30·540 ins. on November 17th; and the lowest was 28·280 ins. on December 29th. The yearly range was 2·260 inches.

Temperature.—The temperature of the air was generally above its average from January 1st to the 23rd, being as much as 10°·8, 10°·3, 10°·2, 10°·3, 11°·2, 10°·2, 14°·3, and 10° 4 in excess on the 4th, 8th, 9th, 18th, 19th, 20th, 21st, and 22nd respectively, and on several other days during this period the temperature was as much as 8° and 9° in excess of its average, the mean daily excess for the 23 days ending January 23rd was 6°·5; from January 24th to February 6th it was below, the mean daily deficiency being 3°·8; from February 7th to the 23rd it was above, being particularly so on February 8th, 9th, 10th, 11th, and 13th, when it was as much as 11°·2, 13°·9, 18°·8, 12°·8, and 11°·1 respectively in excess; the mean daily excess for the 17 days ending February 23rd was 7°·1; from February 24th to March 7th it was generally below, the mean daily deficiency being 2°·9; from March 8th to the 15th it was above, the mean daily excess being 3°·0; from March 16th to the 25th it was below, being as much as 12°·4, 10°·0, 12°·3, and 10·6 below on March 21st, 22nd, 23rd, and 24th respectively, the mean daily deficiency for the 10 days ending March 25th was 7°·4; from March 26th to April 6th it was above, the mean daily excess being 5°·6; from April 7th to the 24th it was generally below, the mean daily deficiency being 3°·1; from April 25th to the 29th it was above, the mean daily excess being 2°·6; from April 30th to May 30th it was generally below, being as much as 10°·6, 12°·1, and 10°·7 below on May 25th, 26th, and 27th respectively; the mean daily deficiency for the 31 days ending May 30th was 2°·4; from May 31st to June 7th it was above, being as much as 11°·4, 9°·2, and 9°·1 in excess on June 2nd, 5th, and 6th respectively, the mean daily excess for these 8 days being 7°·0; from June 8th to the 15th it was generally below, the mean daily deficiency being 3°·8; from June 16th to the 30th it was generally above, the mean daily excess being 1°·1; from July 1st to the 5th it was below, the mean daily deficiency being 2°·6; on July 6th a hot period set in and continued till September 9th, the temperature of the air was generally above its average, being particularly so on July 19th, 20th, and 21st, August 15th, 25th, and 27th, and on September 5th, when

it was as much as 10°·7, 10°·9, 11°·1, 10°·8, 13°·2, 10°·5, and 13°·1 respectively in excess; the mean daily excess for the 66 days ending September 9th was 4°·5; on September 10th and 11th it was below, the mean daily deficiency being 2°·9; from September 12th to the 19th it was above, the mean daily excess being 0°·5; on September 20th and 21st it was below, the mean daily deficiency being 3°·0; from September 22nd to the 26th it was generally above, the mean daily excess being 1°·5; from September 27th to October 23rd it was generally below, the mean daily deficiency being 3°·5; from October 24th to November 17th the weather was remarkably mild, and the temperature above its average, being as much as 11°·0, 10°·2, 11°·4, 11°·6, and 10°·3 in excess on October 27th and 28th, November 2nd, 4th, and 10th respectively; the mean daily excess for the 25 days ending November 17th was 5°9; from November 18th to the 21st it was below, the mean daily deficiency being 0·5; from November 22nd to December 7th it was above, being as much as 10°·2 in excess on December 6th, the mean daily excess was 4°·7; on December 8th a cold period set in, and continued till the 28th, the weather being exceptionally cold, and the temperature of the air below its average, being particularly so on December 11th, 13th, 14th, 15th, and 27th, when it was as much as 11°·5, 11°·2, 11°·1, 13°·6, and 10°·3 respectively below; the mean daily deficiency for the 21 days ending December 28th was 6°; and from December 29th to the 31st it was above, the mean daily excess was 5°·2.

The highest temperatures of the air were at Camden Square 91°·2; at Osborne 90°·9; and at Barnet 90°·5.

The lowest temperatures of the air were at Llangammarch Wells 0°·0, at Barnet 8°·5, and at Stonyhurst and Carlisle 11°·2.

Rainfall.—The fall of rain was above its average in both January and February, and below its average in March; the total fall in the three months at Greenwich was 5·07 ins., or 0·15 in. above the average. The fall of rain was above its average in April, and below in both May and June; the total fall in the three months at Greenwich was 5·41 ins., or 0·20 in. below the average. The fall of rain was below its average in each of the months of July, August, and September; the total fall in the three months at Greenwich was 4·32 ins., or 2·90 ins. below the average. The fall of rain was below its average in October, above in November, and below again in December; the total fall in the three months at Greenwich was 7·54 ins., 0·45 in. above the average.

The heaviest falls of rain at our stations were 47·66 ins. at Stonyhurst; 46·78 ins. at Llangammarch Wells; and 35·33 at Halifax Public Library.

The least falls were 18·82 ins. at Cambridge; 21·29 ins. at Hull; and 22·03 ins. at Oxford.

The greatest number of days of rain were at Stonyhurst 197; at Liverpool 188; and at Carlisle 187.

The least number of days of rain were at Croydon 126; at Ventnor 127; and at Oxford 129.

Thunderstorms occurred on 58 days at the different stations; of these 12 were in September, 10 in July, 8 in both May and August.

4 in both February and June, 3 in both January and October, and 2 in each of the months of April, November, and December.

Thunder was heard but lightning was not seen on 60 days; of these 13 were in July, 12 in September, 10 in August, 6 in April, 5 in May, 4 in both June, and November, 3 in January, 2 in March, and 1 in February.

Lightning was seen but thunder was not heard on 60 days; of these 10 were in August, 9 in September, 7 in July, 6 in both January and November, 5 in May, 4 in both April and June, and 3 in each of the months of February, October, and December.

Solar halos were seen on 99 days; of these 17 were in June, 13 in March, 10 in both February and July, 9 in each of the months of April, May, and August, 7 in September, 5 in November, 4 in October, and 3 in both January and December.

Lunar halos were seen on 49 nights; of these 9 were in February, 7 in December, 6 in January, 4 in each of the months of March, April, September, and November, 3 in each of the months of May, June, and July, and 1 in both August and October.

Aurora borealis was seen on 2 nights, viz., 1 in both January and February.

Snow fell on 55 days; of these 16 were in December, 12 in January, 10 in March, 8 in both February and April, and 1 in May.

Hail fell on 66 days; of these 11 were in January, 10 in March, 9 in both April and December, 7 in September, 5 in February, 4 in each of the months of May, October, and November, and 1 in each of the months of June, July, and August.

Fog prevailed on 148 days; of these 22 were in both October and December, 18 in both February and November, 16 in January, 14 in March, 8 in both July and August, 6 in both May and June, and 5 in both April and September.

* For the purposes of this table the deaths of Londoners during recent years in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, have been included, and the deaths of persons not belonging to London occurring in the London Fever Hospital, in the Middlesex County Lunatic Asylums at Wandsworth and Streatham, and in the Metropolitan Asylums Board Hospitals within Registration London, have been excluded. Some of the figures for 1899 may differ, therefore, from those in Tables 11, 26, and 27.

Intemperance { Chronic Alcoholism.	4055
Intemperance { Delirium Tremens.	880
Rheumatic Fever, Rheumatism of Heart.	4550
Rheumatism..	1586
Gout	961
Rickets..	2295
Cancer	45248
Tabes Mesenterica	10818
Tubercular Meningitis (Acute Hydrocephalus).	11085
Phthisis	72891
Other Forms of Tuberculosis, Scrofula.	9467
Purpura, Hæmorrhagic Diathesis.	571
Anæmia, Chlorosis, Leucocythæmia.	3207
Diabetes Mellitus	4672
Other Constitutional Diseases.	1817
Premature Birth	31880
Atelectasis	2061
Cyanosis	1977
Spina Bifida	1241
Imperforate Anus	301
Cleft Palate, Harelip ..	364
Other Congenital Defects	825
Old Age	54103

CAUSE OF DEATH.	Proportional Number.
Inflammation of Brain or its Membranes.	12986
Apoplexy	32678
Softening of Brain	4376
Hemiplegia, Brain Paralysis.	10720
Paralysis Agitans	667
Insanity, General Paralysis of Insane.	6550
Chorea	296
Epilepsy	4720
Convulsions	30971
Laryngismus Stridulus ..	748
Idiopathic Tetanus.. ..	41
Paraplegia, Diseases of Spinal Cord.	4153
Other Diseases of Nervous System.	4414
Otitis, Otorrhœa	1554
Epistaxis and Diseases of Nose.	131
Ophthalmia and Diseases of Eye.	91
Endocarditis, Valvular Disease.	20828
Pericarditis	1038
Hypertrophy of Heart ..	425
Angina Pectoris	1200
Syncope	2104
Aneurism	1545
Senile Gangrene	2197
Embolism, Thrombosis ..	2654
Phlebitis	309
Varicose Veins	153
Other Diseases of Circulatory System.	60655
Laryngitis	2274
Croup	1729
Other Diseases of Larynx and Trachea.	213
Emphysema, Asthma ..	4845
Bronchitis	88013
Pneumonia	68486
Pleurisy	2827
Other Diseases of Respiratory System.	6648
Stomatitis (Dis. of Mouth)	837
Dentition	5837
Sore Throat, Quinsy ..	1011
Dyspepsia	182
Hæmatemesis	469
Melæna	186
Diseases of Stomach ..	9675
Enteritis	9551
Gastro-Enteritis	23541
Ulceration of Intestine ..	593
Ileus, Obstruction of Intestine.	3807
Stricture or Strangulation of Intestine.	248
Intussusception of Intestine.	786
Hernia	2542
Fistula	89
Peritonitis	3427
Ascites	258
Gallstones	839
Cirrhosis of Liver	7790
Other Diseases of Liver ..	5210
Other Diseases of Digestive System.	684
Diseases of Spleen	91
Diseases of Lymphatic System.	533
Diseases of Thyroid Body	536
Diseases of Supra-Renal Capsules.	354

CAUSE OF DEATH.	Proportional Number.
Acute Nephritis	4218
Bright's Disease	15818
Uræmia	701
Suppression of Urine ..	96
Calculus	421
Hæmaturia	110
Diseases of Bladder and of Prostate.	3989
Other Diseases of Urinary System.	1071
Ovarian Disease	767
Diseases of Uterus and Vagina.	1219
Disorders of Menstruation	151
Pelvic Abscess	110
Perineal Abscess	24
Diseases of Testes, Penis, Scrotum, &c.	122
Abortion, Miscarriage ..	308
Puerperal Mania	127
Puerperal Convulsions ..	596
Placenta Prævia, Flooding	1188
Phlegmasia Dolens	112
Other Accidents of Childbirth.	1825
Caries, Necrosis	1349
Arthritis, Ostitis, Periostitis	514
Other Diseases of Organs of Locomotion.	641
Carbuncle	278
Phlegmon, Cellulitis ..	822
Lupus	105
Ulcer, Bedsore	918
Eczema..	609
Pemphigus	270
Other Diseases of Integumentary System.	378
Accident { In Mines and Quarries	1605
Accident { Vehicles and Horses ..	4852
Accident { Ships, Boats, and Docks (not drowning).	552
Accident { Building Operations ..	423
Accident { Machinery	447
Accident { Weapons and Implements.	248
Accident { Burns and Scalds ..	4667
Accident { Poison, Poisonous Vapours.	1093
Accident { Drowning..	4899
Accident { Suffocation	3828
Accident { Falls	5303
Accident { Weather Agencies ..	748
Accident { Otherwise, or not stated	34[illegible]9
Homicide	500
Suicide	4888
Execution	26
Dropsy	361
Debility, Atrophy, Inanition.	35083
Mortification	64
Tumour	139
Abscess	614
Hæmorrhage	196
Sudden (Cause unascertained).	364
Other ill-defined Causes ..	124
Not specified Causes .	2780

* For the years prior to 1894 the Town Districts consisted of the 33 great towns; 67 other large town districts (represented approximately by registration districts or sub-districts); and all other registration sub-districts, three-fourths of the population of which, as enumerated in 1881, resided within the boundaries of Urban Districts existing in 1886. The present list of Town Districts was formed in 1894 and consists of the 33 great towns, 67 other large towns, and all other registration districts and sub-districts, three-fourths of the population of which, as enumerated in 1891, then resided within the boundaries of Urban Districts. The Country Districts consist of the remainder of England and Wales.

NOTE.—*Up to and including* 1886 masters were excluded from the above employment and mortality figures; the latter of which contain some cases of men who died in colonial and fishing vessels not registered under the Merchant Shipping Acts, whose crews are not included in the employment column.

Since 1886 masters are included in both columns, and the employment and mortality figures relate only to persons employed in sea-going vessels (except yachts) registered under Part I. of the Merchant Shipping Act, belonging to the United Kingdom, the Isle of Man, and Channel Islands. In and since 1896 the "Number of persons employed" is the sum of the number of persons engaged for the first crew of each vessel on the register on 1st January of the year and employed at sea during the preceding year.

* The prices of Consols for the years 1850–52 relate to the 12 months beginning 1st April; from 1853 onwards the prices relate to calendar years. For the years 1850–88 the prices relate to stock bearing 3 per cent. interest, for 1889–99 to stock bearing 2¾ per cent.

† From the Board of Trade Statistical Abstract.

‡ The Registrar-General is unable to give precise information as to the price of meat for the years 1889–91.

§ The prices of coal are furnished by the Mineral Statistics Department of the Home Office.

‖ Derived from Returns, published by the Local Government Board, of the number of persons in receipt of Relief on the last day of each week.

INTERNATIONAL VITAL STATISTICS.

NOTE.—The numbers of marriages, births, and deaths in Alsace-Lorraine during the years 1869 and 1870 have been excluded from those shown in the table; and in the calculation of rates for these two years the population of Alsace-Lorraine has been subtracted from the total population. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census year. † Cholera prevailed in 1854, and war raged in 1870 and 1871.

NOTE.—The numbers for Rome were first included with those for the Kingdom of Italy in 1872. The population figures given for census years show the numbers enumerated on 31st December in each of those years; for the years subsequent to 1881 the population is estimated on the assumption that the rate of increase which prevailed in the last inter-censal period has since been maintained.

* The *Registration Counties* consist of groups of Registration Districts, each such District being generally co-extensive with the Poor Law Union of the same name. A District which extends into two or more Geographical Counties is included entirely in that Registration County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties differ therefore more or less from the boundaries of the Geographical Counties. For areas and populations of the Registration Divisions and Counties, see pages 64 and 66.

* The *Registration Districts*, 635 in number at the end of the year 1899, are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are generally co-extensive with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties. The Registration Sub-districts (2069 in number) are sub-divisions of Registration Districts, within which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse, a Workhouse Infirmary, or a Fever Hospital under the control of the Poor Law Authorities, belonging to the District or Union in which it stands; *w* indicates a similar Institution belonging wholly or partly to other Districts or Union than that in which it stands; *H* indicates a Hospital or Infirmary (not Workhouse); *L* a Lunatic Asylum.

† These areas, revised by the Ordnance Survey Department, are derived from those published in the Census Report of 1891. They do not include space occupied by foreshore or tidal water of rivers and creeks. Numerous changes in the boundaries of Districts and sub-districts have taken place since the Census of 1891; in the majority of these cases the new areas have not yet been ascertained.

‡ The population of the Registration County of London at the Census taken on 29th March 1896 was 4,411,710. The numbers enumerated in the separate sub-districts are shown in Table 5 of the Registrar General's Weekly Returns.

§ The Deaths in the principal Institutions during 1899 are given on pages 75-120.

‖ 2: 1, 2.—The boundary between these sub-districts was altered on 1st April 1899; see page 287. The births and deaths cannot be shown for the separate sub-districts.

* See note ‡ on page 4.

† 11: 1.—On 1st November 1899 the sub-districts of St. George Bloomsbury and St. Giles South were united under the name of Bloomsbury and St. Giles South; see page 287. The births and deaths are shown as if the change had taken place at the beginning of the year.

‡ 14: 4.—On 1st September 1899 the sub-districts of St. Botolph and Broad Street were united under the name of St. Botolph; see page 287. The births and deaths are shown as if the change had taken place at the beginning of the year.

§ 17: 2, 3.—On 1st January 1899 the sub-district of Whitechapel Church was dissolved; part of the sub-district was added to Mile End New Town and the remainder to Goodman's Fields; see page 287.

* 173 : 4 : 175 : 1, 2.—The Registration District of Woburn (174) was dissolved on 1st October 1899. Part of the district was added to Leighton Buzzard sub-district, and the remainder was constituted the Woburn sub-district of Ampthill. The boundary between Leighton Buzzard and Wing was also altered during the year; see page 289. The births, deaths and marriages are shown as if all the changes had taken place at the beginning of the year.

† 179 : 2.—On 1st January 1899 the sub-districts of St. Mary-the-Great and St. Andrew-the-Great were united under the name of St. Andrew-the-Great; see page 289.

* 450.—The District of CHESTER comprises the three Poor Law Unions of Tarvin (Tattenhall sub-district), Chester (Chester Castle and Chester Cathedral sub-districts), and Hawarden (Hawarden sub-district).

† 455: 3, 4, 5, 9, 10.—On 1st July 1899 the area comprised in Walton and West Derby Rural sub-districts was re-divided into four sub-districts, Fazakerley, Walton, Bootle, and West Derby Eastern; on the same date West Derby Municipal sub-district was renamed West Derby Western; see page 293. The births and deaths are shown as if the changes had taken place at the beginning of the year.

‡ 456: 5, 6.—On 1st July 1899 changes were made in the boundary of these sub-districts: see page 293.

* 625: 1, 2.—On 1st May, 1899, the boundary between the sub-districts of Festiniog and Llanfihangel-y-Traethau was altered, and on 1st June the latter sub-district was re-named Deudraeth; see page 294. The births and deaths are shown as if the change had taken place at the beginning of the year.

† 628: 2, 3.—On 1st January, 1899, the sub-district of Bangor was divided into two sub-districts, namely, Bangor (2), and Llanfairfechan (3); see page 294.

DEATHS IN WORKHOUSES, HOSPITALS, LUNATIC AND IDIOT ASYLUMS.

1899.

The following Table shows the numbers of deaths (Persons, Males, and Females) registered during 1899 in Workhouses, Hospitals, Lunatic Asylums, and Idiot Asylums of England and Wales. These figures afford the means of correcting the mortality of districts and sub-districts in which these Institutions are situated. The Table includes 2241 Institutions; of these 762 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 18 are Hospitals and Imbecile Asylums under the control of the Metropolitan Asylums Board, these institutions being counted with Workhouses in the Table; 1341 are Hospitals or Infirmaries; and 120 are Lunatic Asylums. The Lunatic Asylums comprise County and Borough Asylums, Lunatic Hospitals, and Idiot Asylums. In these 2241 Institutions 82,103 deaths were registered during the year, or 14·1 per cent. of the total deaths in England and Wales, against 13·3 and 13·6 per cent. in the two preceding years; 47,312 occurred in Workhouses, 26,856 in Hospitals, and 7935 in Lunatic Asylums. The proportion to total deaths was 8·13 per cent. in Workhouses, 4·62 in Hospitals, and 1·36 in Lunatic Asylums. The proportion of deaths recorded in Workhouses, which had been 7·55 and 7·69 per cent. in 1897 and 1898 respectively, was 8·13 per cent. in 1899.

Information relating to the deaths recorded in many Private Lunatic Asylums, and in a few other institutions, will be found in the notes to the following pages.

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT, according to the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* Districts having compound names are placed alphabetically according to the initial letter of the word spoken first locally : thus, East Ashford will be found under the letter E, and *not* under A.

For names of Towns such as Accrington, Queenborough, &c., which are not found in this "Index of Registration Districts," see the "Index of Registration Sub-districts" (pp. 268–278) *and "Index of Urban Districts"* (pp. 279–286).

A

Aberayron, 604.
Abergavenny, 582.
Aberystwith, 605.

York, 516.

In consequence of numerous alterations in districts since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881. Since that date the district of Woburn (174) has been dissolved and six new Registration Districts have been formed, the District of Kensington having been divided into Paddington (1*a*) and Kensington (1*b*), the District of Caistor into Grimsby (424*a*) and Caistor (424*b*), the District of Glossop into Glossop (442*a*) and Hayfield (442*b*), the District of Bradford into Bradford (497*a*) and North Bierley (497*b*), the District of Stockton into Stockton (543*a*) and Sedgefield (543*b*), and the District of Anglesey into Anglesey (630) and Holyhead (631).

INDEX OF REGISTRATION SUB-DISTRICTS.

In this arrangement the principle is adopted of placing the Sub-Districts (or Registrars' Districts) havin *compound names* in alphabetical order according to the initial letter of the word spoken first locally; thus East Grinstead will be found under the letter E, and not as "Grinstead, East"; St. James under th letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to it numerical place in the Tables of Abstracts; thus Abbey Holme (573; 2) is the 2nd Sub-District o Wigton District (No 573).

Sub-District.	District.	No.
A		
Abbey Holme	Wigton	573; 2
Abbots Bromley.	Uttoxeter	366; 2
Abbotsbury	Weymouth	264; 4
Abbots Langley.	Watford	137; 4

URBAN DISTRICTS.

Urban Districts are not in general co-extensive with Registration Areas; their exact constitution is shown in the Census Report, vol. ii., table 4.

The names of most Urban Districts are identical with those of Registration Districts or sub-districts in which they are wholly or partly situated (*see* Indexes on pages 264–278).

The following Index will facilitate reference when the name of an Urban District does not correspond with that of any Registration Area in which it, or any part of it, is situated :—

Name of Urban District.	Registration District.	Sub-district.	District and Sub-district Numbers.
Aberavon, M.B. ...	Neath	Margam	590 ; 1
Abercarn	Newport	Mynyddyslwyn ...	585 ; 5

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE YEAR 1899.

Changes in Registration boundaries are made by Order of the Registrar-General, with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.

Date when change came into operation.	DISTRICT and Sub-district.				Name of Parish transferred.	Population, 1891.
	Decreased by change.		Increased by change.			
	Name.	No.	Name.	No.		
1899.						
1 April	On this date the boundaries of the two Sub-districts of St. Peter, Hammersmith, and St. Paul, Hammersmith, in Fulham Registration District (No. 2), were re-arranged, and the new areas thus formed were named; 1, North Hammersmith, and 2, South Hammersmith.					
1 Nov.	ST. GILES .. .. St. Giles South .. (Sub-district abolished.)	11 2	ST. GILES .. .. St. George, Bloomsbury. (Re-named Bloomsbury and St. Giles South.)	11 1	St. Giles in the Fields and St. George, Bloomsbury (*part of*).	13,454
